In resonance with cosmic energies: terrorism and marketing /

Н. И. Конюхов — «ЛитРес: Самиздат», 2018

This book is about the facts of fundamental dependency between the mankind development and cosmic energies: both electromagnetic and non-electromagnetic ones. The facts are systematized in graphs.

© Конюхов Н. И., 2018

© ЛитРес: Самиздат, 2018

Introduction

For decades, research centers were systematically studying the human changes in the process of practical, as well as industrial, activity, considering the factors of cosmic activity.

The essence of the obtained scientific results is in a definite consequence: it is impossible to understand the development of mankind and Russia without considering the cosmic energy factor in a scientific analysis.

Sometimes, at websites a number of visitors and buyers sharply increases, and sometimes sharply drops. Unexpected data: this depends on the Earth's rotational velocity, on the change in the sign of the acceleration of its rotation. This involves a change in psyche of people.

To understand the essence of such dependencies is difficult without accepting the idea of cosmic ether and its influence on all living things.

There are three mechanisms for changing the density of the etheric medium in which Earth is located:

1. Change in the speed of movement of Earth in space with a constant density of the ether. The Earth's velocity increases cyclically from aphelion to perihelion, where it reaches a maximum, and then decreases to aphelion. In addition to the speed of Earth affects the change in its position relative to other planets of the solar system, the force of gravity. The greater the speed of Earth – the more ether passes through humanity, and the planet itself slows down its rotation. The indicator of these changes is the length of Earth day (LOD – length of a day), the change of which is measured in milliseconds. The greater the density of the ether surrounding Earth, the greater is the LOD.

2. Change in the density of the cosmic ether into which the solar system enters. In this case, not only does the Earth's rotational velocity slow down, but also the speed of the flight of the solar system. A sign of this is the increase or decrease in LOD from year to year.

3. "Resonances" between planets that perturb the ether with their rotation, oscillations. When Earth passes through these vortices, it falls under the additional movement of the ether.

If, for some reason, the adoption of these provisions for the initial meets internal resistance, then you can get acquainted with all the previous work of the scientific centers "Biryuch" and "Bamkon" 2015, 2016, 2017.

If this does not dispel doubts, then you can consider the opinion of A. Poincare: there is no ether, but everything happens as if it is.

If this psychiatric method does not help, then everything can be explained by the ingress of Earth into denser layers of baryonic matter. Opinion from solid, recognized scientific work: "For the first time in Russia, according to ground-based measurements, an acoustic-gravity signal with a maximum amplitude of 45 dN/cm squared is presumably from an explosion in the atmosphere of the Vitim bolide on September 24, 2002 at a distance of 4000 km from the source. In this case, plausible values of the direction and velocity of signal propagation were obtained. The analysis of this event confirms the facts obtained earlier that bright bolides of a large mass can create powerful pulsed radiation of acoustic-gravitational waves in the Earth's atmosphere, which can be fixed by microbarographs at a distance of several thousand kilometers. Note that the acoustical-gravity signal from the explosion of the car in this frequency range (from 0.0001 to 1 Hz) was recorded for the first time in the world, which was noted in the works of ReVelle, 2004; Edwards et al., 2006 ". [Kasatkina E.A., 2016, p. 143].

Gravitational energy when the substance gets into our atmosphere increases. And it actively influences the growth of trees. And their growth is connected with the development of mankind. That's it!

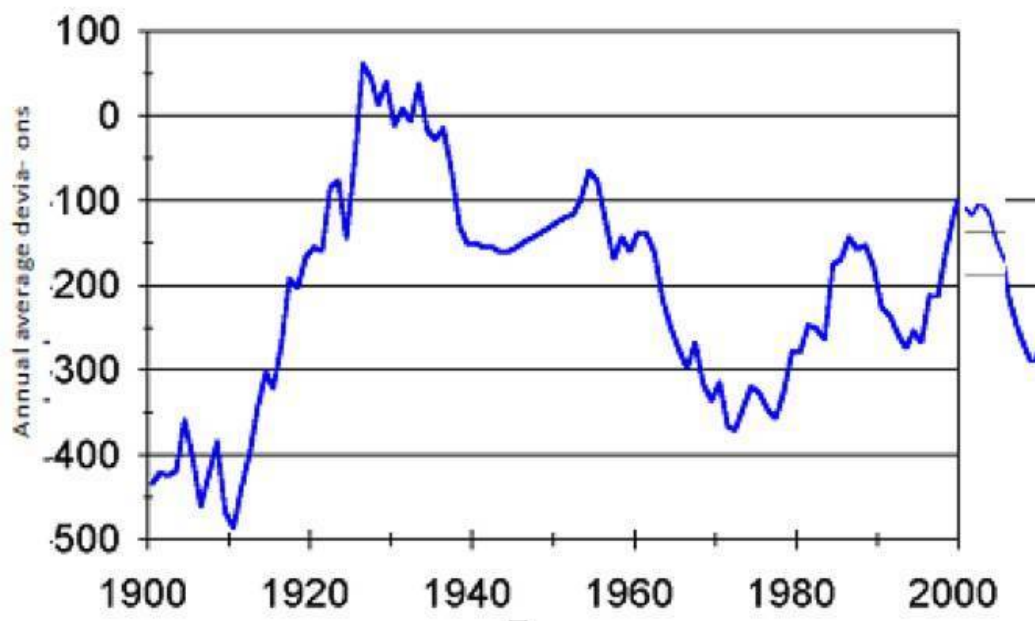

In classical science, experimental data have appeared that allow us to link the development of mankind, our nature with gravity-spin energies.

So we can assume that both there is the ether, and there is not exist, but there is simply a tiny baryonic substance. In this most important point of our analysis, the conclusions of the representatives of classical and new physics converge. And psychologists and sociologists do not need more.

But with the involvement of the conclusions of ether-dynamics it is easier to understand the logic of reasoning, to remember the available statistics, to apply the methods available in this field more creatively. We develop faster when the density of the cosmic ether increases.

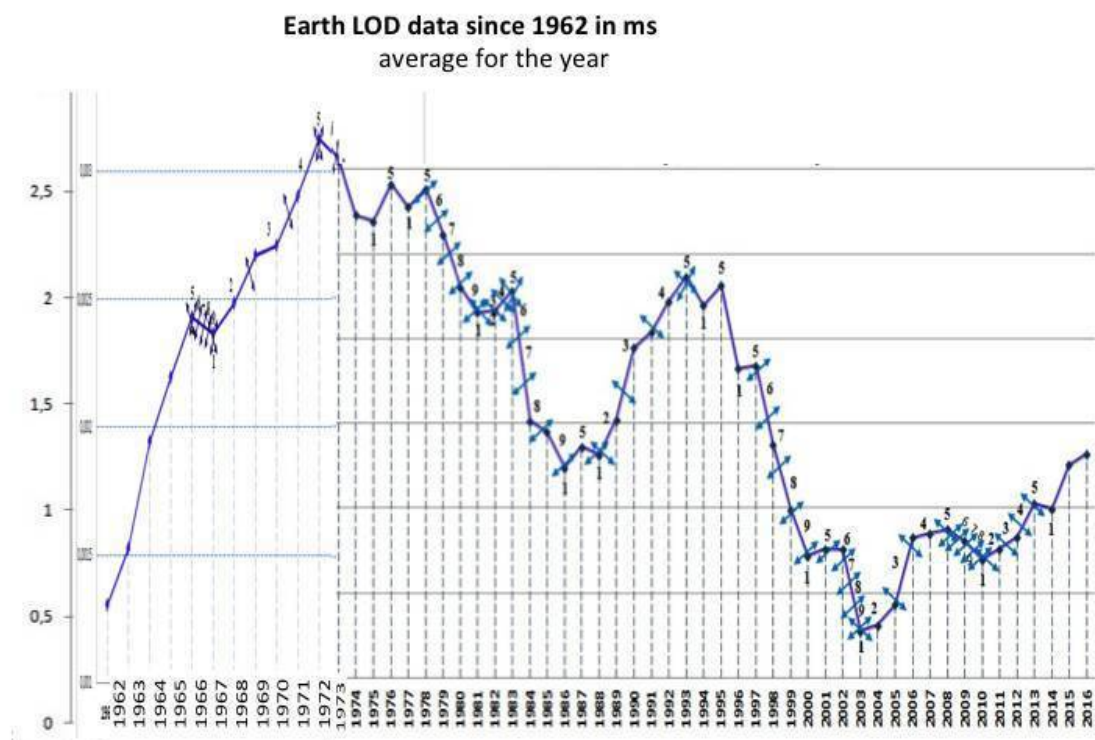

Chapter 1. Cosmic energies and mankind: graphs for reflection

Annual average deviation values of the average Earth's rotational velocity

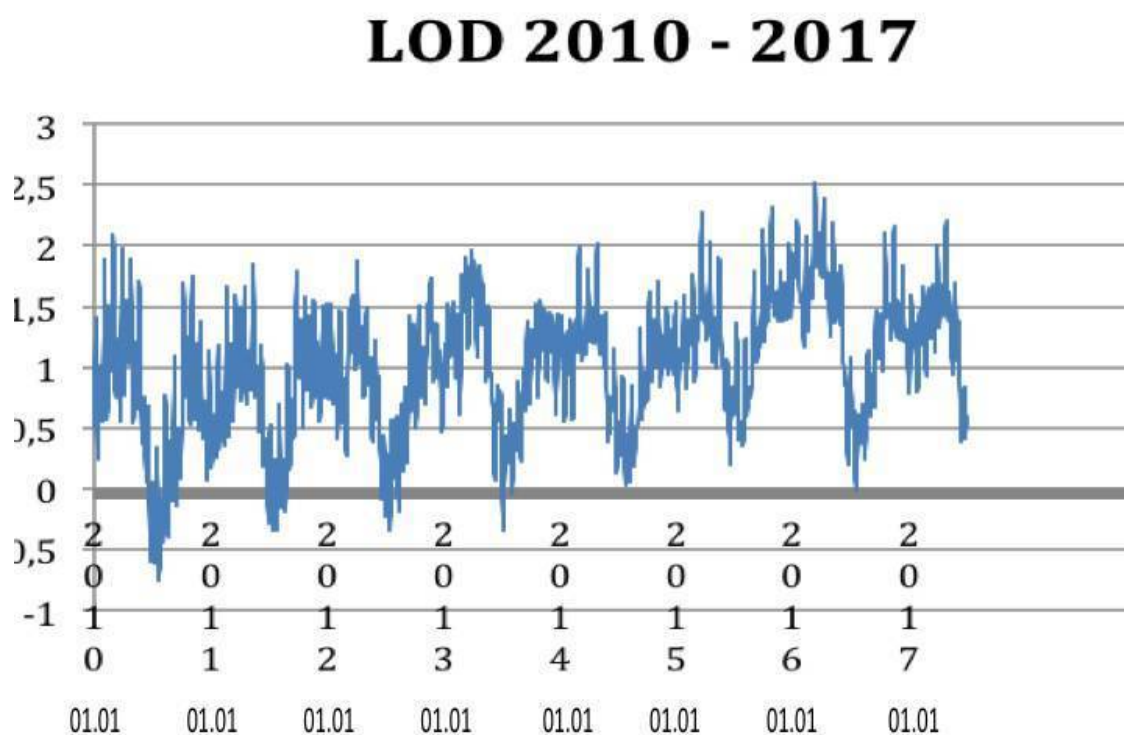

The figure shows the value change over time for the 1900 – 2000 period. The axis of ordinates in these figures is given in units (see V.D. Kokurov).

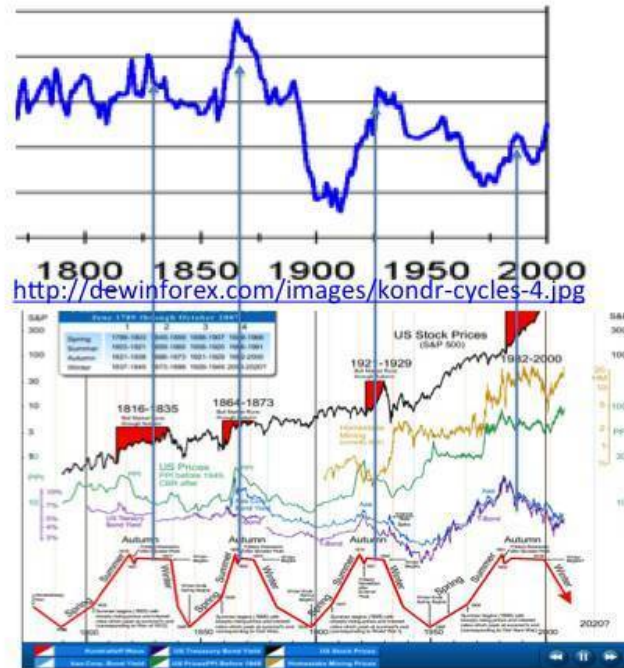

The graphs of the Earth's rotational velocity are mirror-like to the graphs of the length of day – LOD. LOD is measured highly accurately and placed at the websites of laboratories around the world.

Average by day:

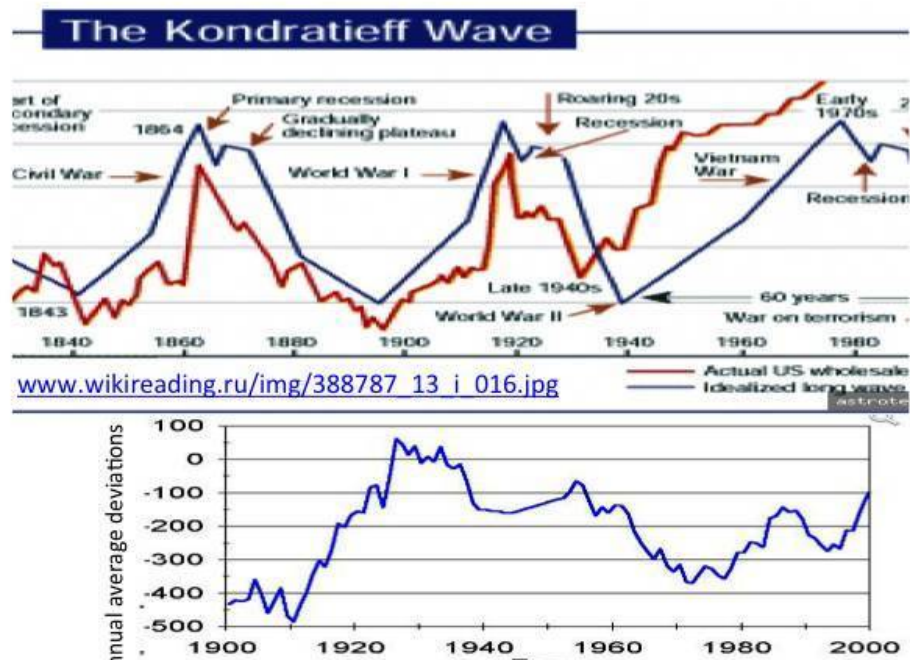

The Earth's angular rotational velocity and Kondratieff cycles

The Earth's angular rotational velocity and Kondratieff cycles with the displacement in 30 years

www.wikireading.ru/img/388787_13_i_016.jpg

Let us combine them with the well-known graphs of economists.

All fundamental economic and socio-political processes are visually related to these graphs.

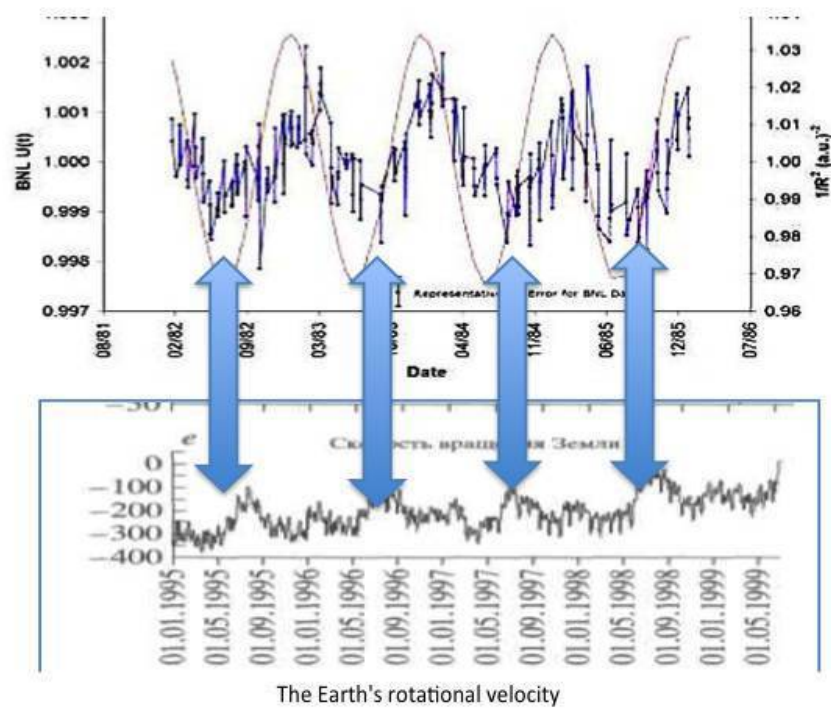

http://nowandfutures.com/key_stats.html

The system of such graphs has been obtained for different countries and for different economic and financial indicators. It leaves no doubt that the Earth's rotational velocity reflects powerful cosmic energies.

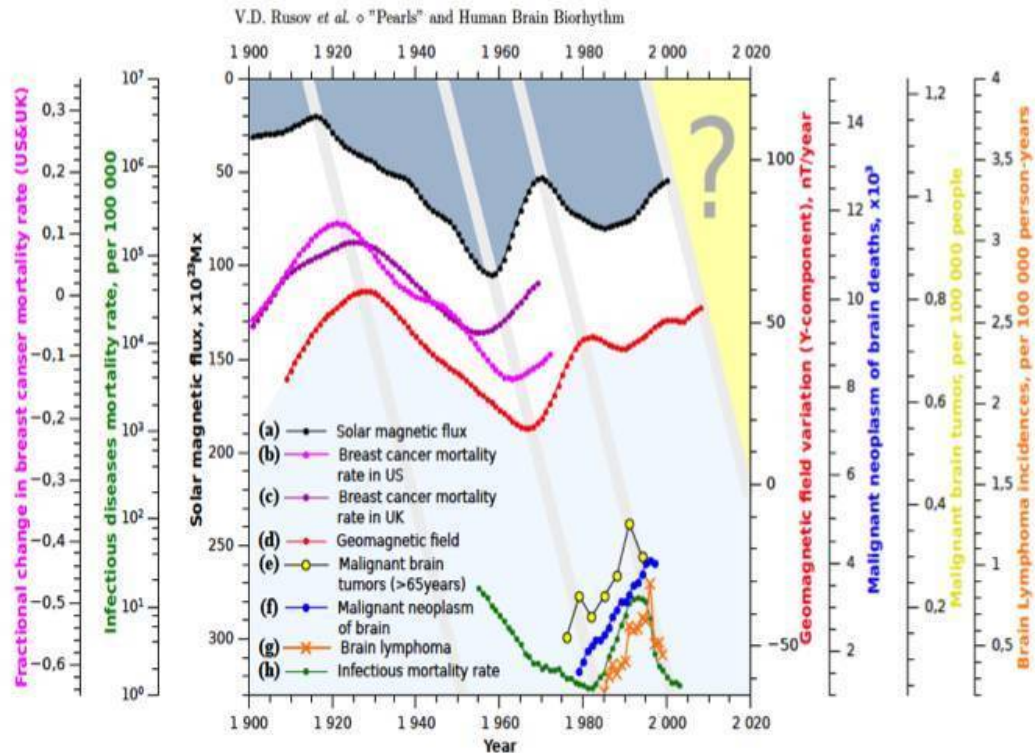

They affect economic processes on Earth, and are also related to the intensity of isotope decay. Scientists of the Brookhaven laboratory in the United States have discovered the annual periodicity of the decay process of silicon isotopes. It is correlated to the value, where is the distance between the Earth and the Sun. At the same time, it is an indicator of the Earth's orbital movement velocity. In winter, at perihelion, it is maximal (the distance to the Sun is minimal), whereas in summer, in aphelion, it is minimal. With the change of the Earth's orbital movement velocity its axial rotational velocity also changes.

Comparative graph of the silicon isotope ^{32}Si half-life and the Earth's rotational velocity

См.: JereH. Jenkins, EphraimFischbach, JohnB. Buncher, JohnT. Gruenwald, DennisE. KrauseandJoshuaJ. Mattes, «EvidenceforCorrelationsBetweenNuclearDecayRatesandEarth-SunDistance» (arXiv:0808.3283v1 [astro-ph]).

Solar activity is a concrete manifestation of cosmic energies. There are profound works in this field.

Time evolution

(a) the variations of magnetic flux at the bottom (tachocline zone) of the Sun convective zone (see Dikpati, G. de Toma, and P. A. Gilman, 2008);

(b) fractional change in female breast cancer mortality (see: Juckett David A., 2009);

(c) fractional change in female breast cancer mortality for birth cohort in UK (see: Juckett David A., 2009);

(d) geomagnetic field secular variations (Y-component, nT/year) as observed at the Eskdalemuir observatory (England) (see: http://www.geomag.bgs.ac.uk/gifs/annual_means.shtml), where the variations (gY/gt) are directly proportional to the westward drift of magnetic features;

(e) Malignant brain tumor (brain stem) (see: Legler Julie M., 1999) ;

(f) the number of deaths from ICD9 item n 191 Malignant neoplasm of brain (see: Pechholdova M., 2008);

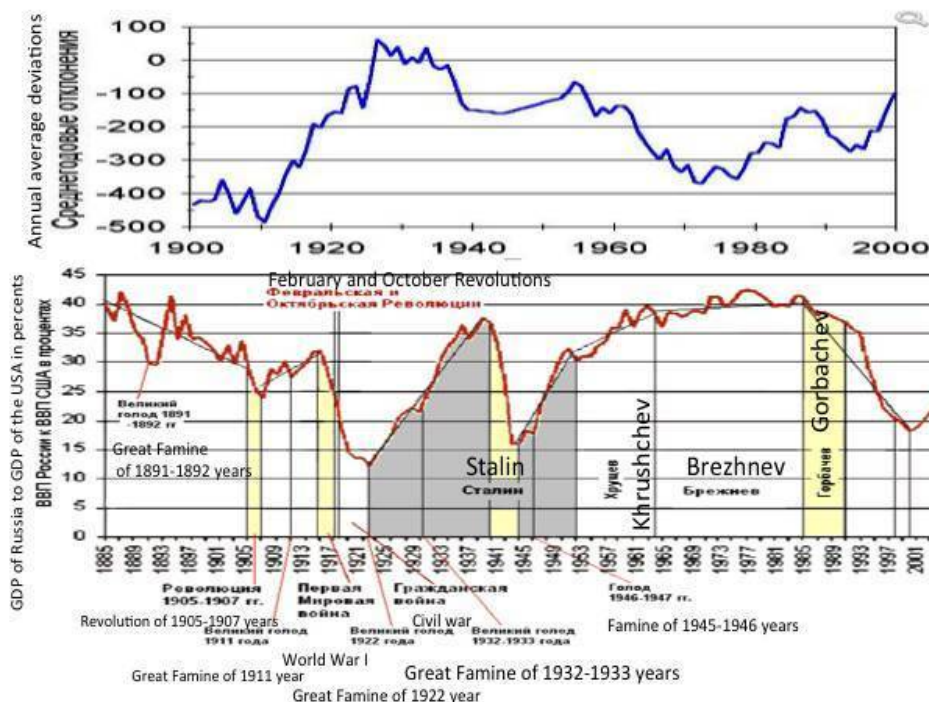

(g) Brain lymphoma incidences in US;

(h) the mortality rates from infectious diseases (incl. Tuberculosis) at ages 15 – 34 in France (see: Mesle F., 2006);

The curves (a) and (b) are smoothed by the sliding intervals of 5 and 11 years.

Such an integral indicator as the GDP growth rate also depends on the Earth's rotational velocity. This dependency is different in different countries.

Correlation of the Earth's rotational velocity change and the relation between GDP of the USSR and Russia to the USA

But the GDP growth is determined by the people's labor activity. Naturally, people changes are also dependent on the Earth's rotational velocity.

On the example of hundreds of Russian and world record-holders, two trends have been identified.

1) Russian athletes win more often at point 5 (minimum of the Earth's rotational velocity) of the cosmic energies change cycle on a scale of days, whereas foreign ones – at point 1 (maximum of the Earth's rotational velocity) of that cycle.

2) Russian athletes win less often during growth of the Earth's rotational velocity.

Our athletes have set Russian records three times more often at the point of 5-day change cycles of the Earth's rotational velocity.

The achievements of Russian athletes significantly depend on cosmic energies, to a greater extent than the achievements of athletes in most countries of the world.

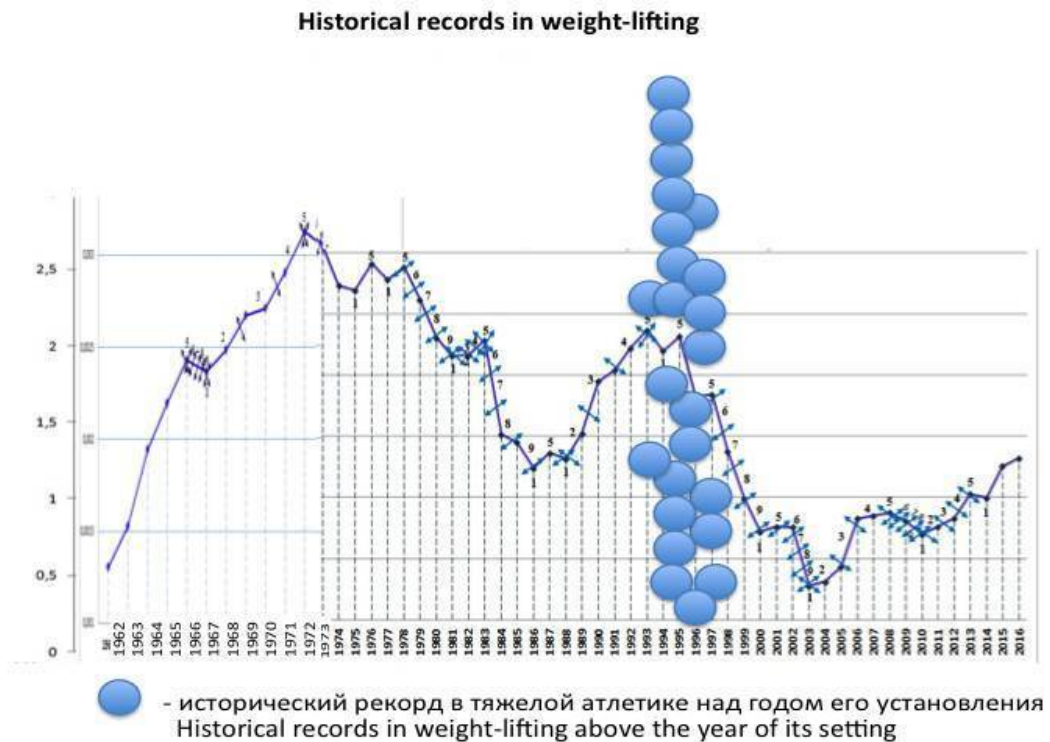

Regarding athletes, the following relationships are identified.

1. At different stages of the change in the Earth's rotational velocity the greatest success is achieved by the athletes who are predisposed by psychotype to activity, to higher achievements precisely at the given cosmic energies.

2. Russian athletes more often win and set the highest records, which are not beaten for decades, in the periods of slowdown of the Earth's rotational velocity.

3. At the stages of different Earth's rotational velocity, different techniques and even systems of selection and athlete training will be more effective.

These conclusions are proven by statistics: during the most successful years, in terms of intensity of the considered cosmic energies, Russian athletes set historical records that cannot be beaten to this day.

There are many reasons for speculation and even doubts. But we will insist only on the obvious: **at different stages of the Earth's rotational velocity, different types of athletes make great sports achievements.** As well as various tree clusters grow differently at the different Earth's rotational velocity.

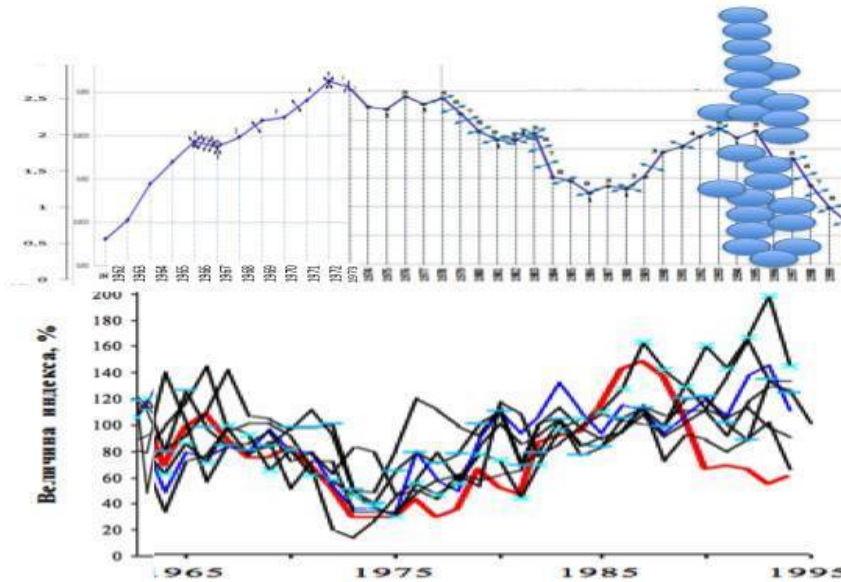

To obtain these results, the Earth's rotational velocity was divided into 9 sections: 1 – the highest velocity, 5 – the lowest. The personality type that is more active at point 1 was called type 1/1, the personality type that is more active at point 5 was called type 5/5. The fact is that such cycles exist both on the scale of days and on the scale of years. Type 1/1 has personality traits, psycho-physiological features, which are identified both in day and annual cycles.

All sports achievements and athlete personalities, terrorist acts and personalities of famous terrorists, movement of stock markets and other markets, the most important historical events were digitized this way.

For groups of people examined at different stages of the day and annual cycles the following data were obtained: EEG (electroencephalogram), ECG (electrocardiogram), solved test results, including those that diagnose intellectual qualities, personality traits, unconscious activity (Smirnov's technique etc.). This made it possible to predict changes in people at the change of the Earth's rotational velocity, at a certain arrangement of planets (which is related to the Earth's rotational velocity). This manifests itself in economic growth, in the growth of people's physiological activity and even biota, particularly in growth of tree rings.

Yu. P. Demakov discovered two tree clusters: one of them grows better at the growth of the Earth's rotational velocity, whereas the other – at its slowdown. GDP growth rates of different countries, achievements of athletes are similarly divided into two clusters, two groups.

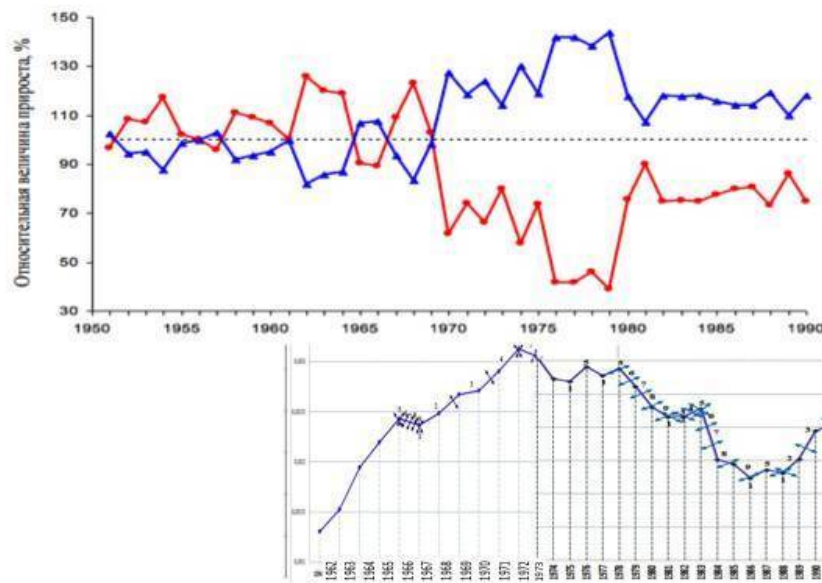

Years of the set historical records in weightlifting and tree-ring gain according to U.P. Demakov

<http://csfm.vlgatech.net/presentation/Demakov.pdf>

Fir tree gain of various clusters (according to U.P. Demakov) and Earth LOD

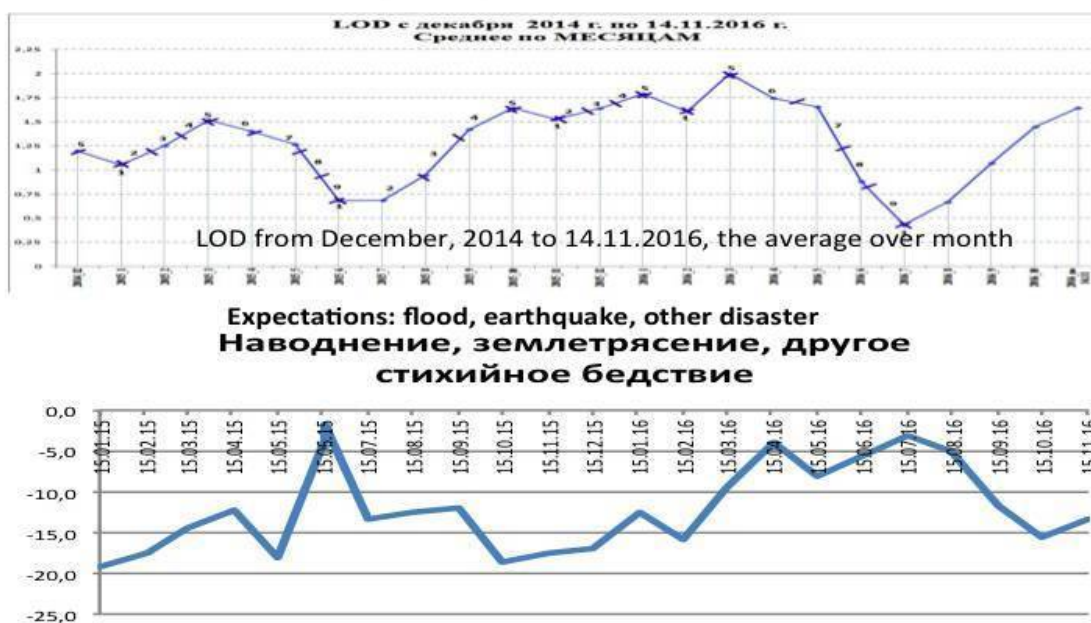

Dynamics of a relative value of a radial gain of fir trees of various clusters in a complex inundated plantation

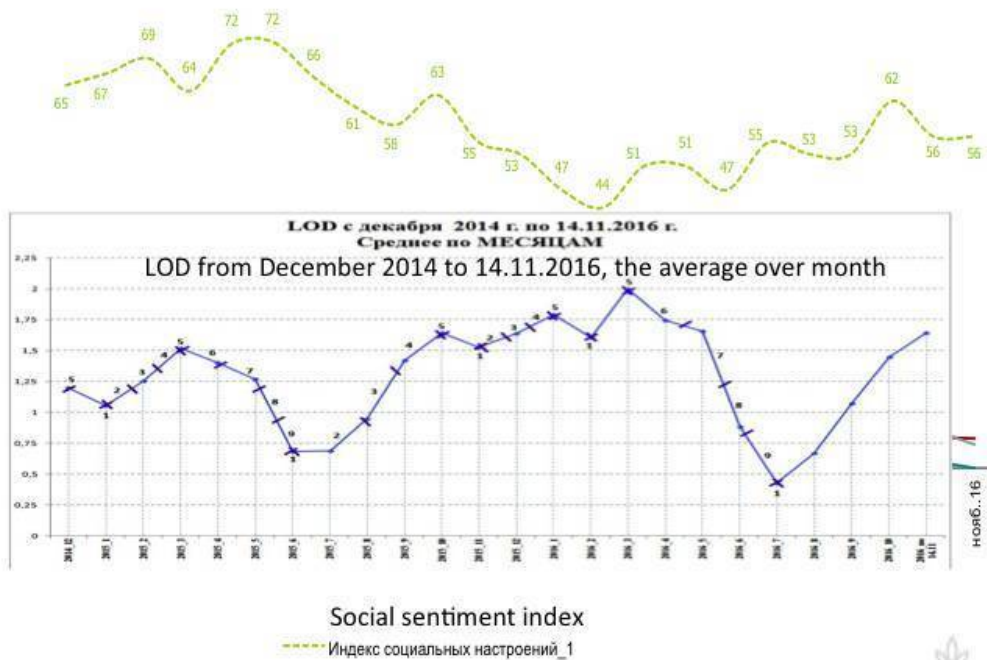

The Earth's rotational velocity is related to many diverse indicators, which are measured by statistics.

Even in our everyday worries, thoughts, moods and even in our fears we are dependent on cosmic energies.

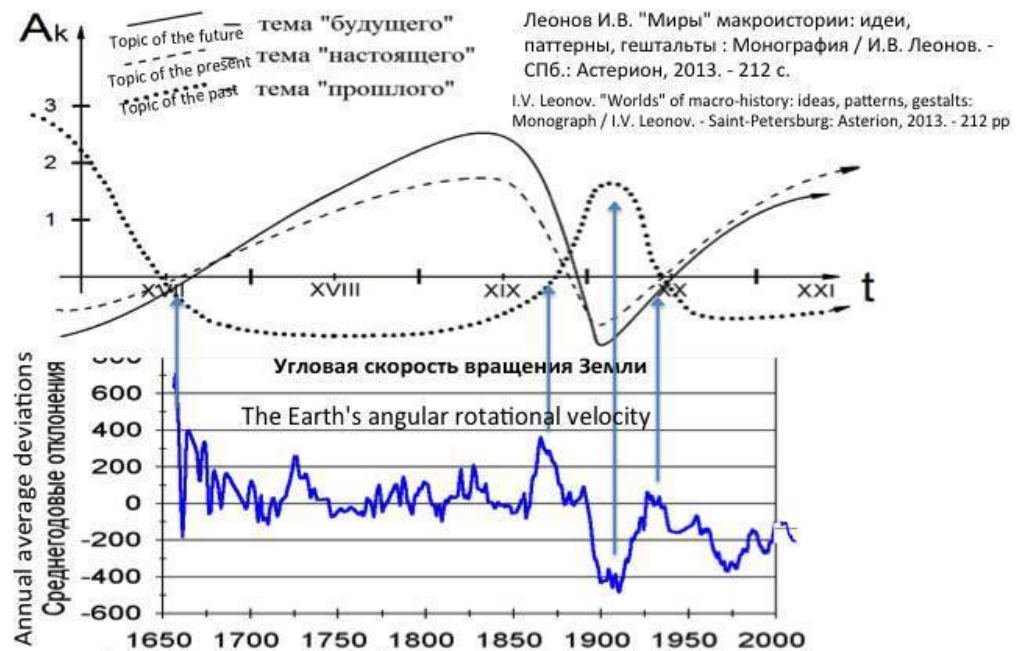

Earth's rotational velocity (LOD) and population's expectation of earthquakes, disasters

Social sentiment index (All-Russian Public Opinion Research Center, ARPORC) and the Earth's rotational velocity in 2015-2016

Topic of the past, the present and the future in the world culture and the Earth's rotational velocity

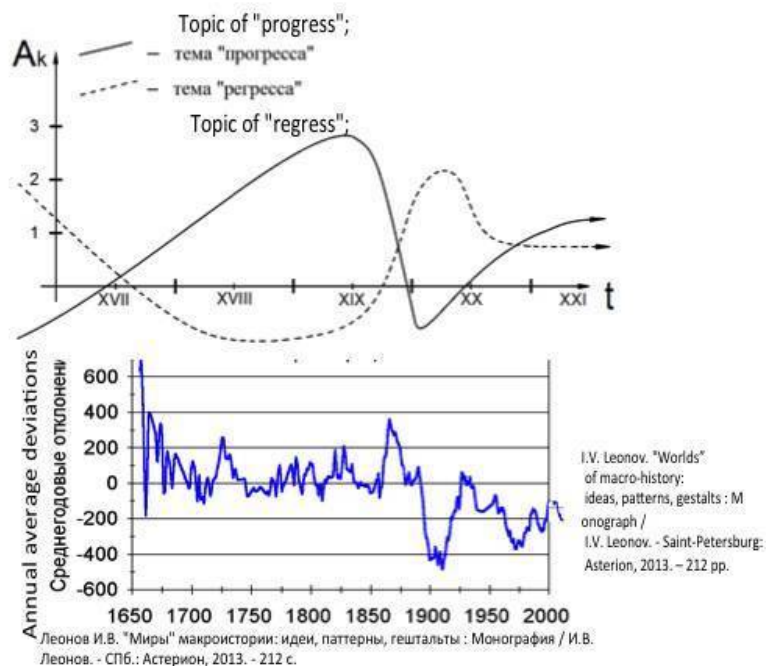

Genesis of the semantic emphases on the past, present and future: the cultural and historical world process
Генезис смысловых акцентов на прошлое настоящее и будущее: культурно-исторический мировой процесс

With the abrupt change of the Earth's rotational velocity in the early 1900s, the topic of philosophical understanding of reality also changes within the past-future meta-program: the interest to the past increases. At the peaks of the Earth's rotational velocity growth the priorities of philosophical, spiritual and literary aspirations change.

In society, with the abrupt change of the Earth's rotational velocity happens the abrupt change of the whole culture, the aggravation of the struggle between progressive and regressive views.

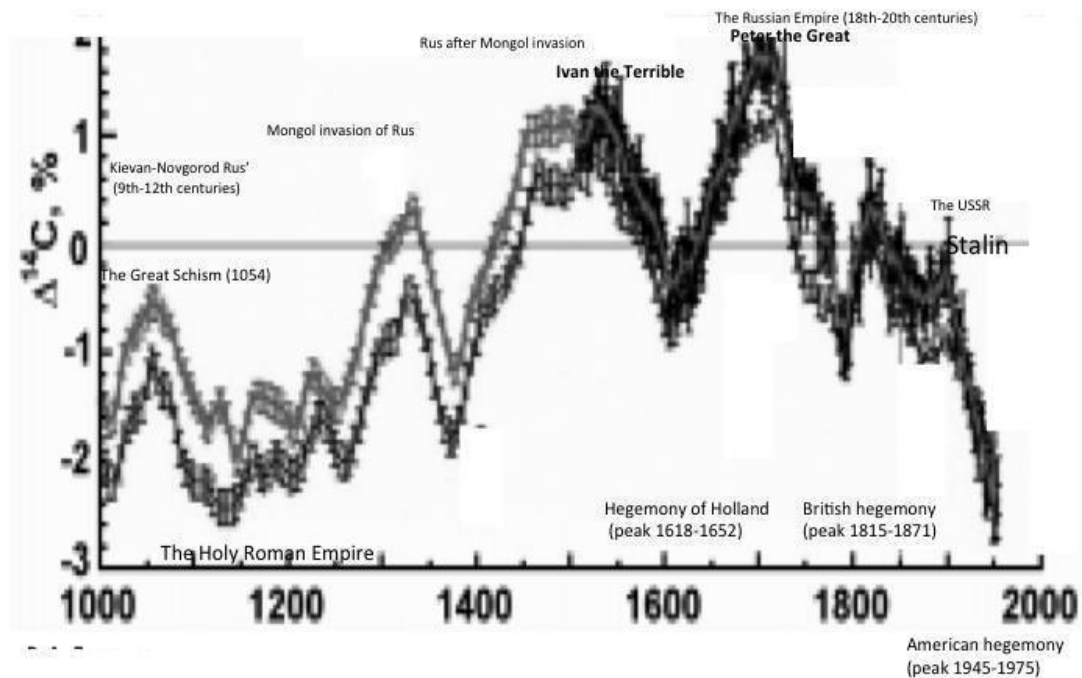

Topic of regress and progress in the world culture and the Earth's rotational velocity

The relations between indicators of cosmic energies are relatively sustained. Each of them may be used both in reconstruction and forecasting of the rest of them. Reconstruction and forecasting of any of these indicators would be more accurate, if the maximum number of the others is used (*the Earth's rotational velocity, temperature, GCR intensity, concentration of the isotopes, Earth's magnetic field strength, width of annual tree rings etc.*).

Changes in biome and history of mankind occur at the same time with changes of cosmic energies.

Concentration of the isotopes of carbon contained in annual tree rings in Northern and Southern hemispheres and changes of basis of a political system in Anglo-Saxon and Russian civilizations

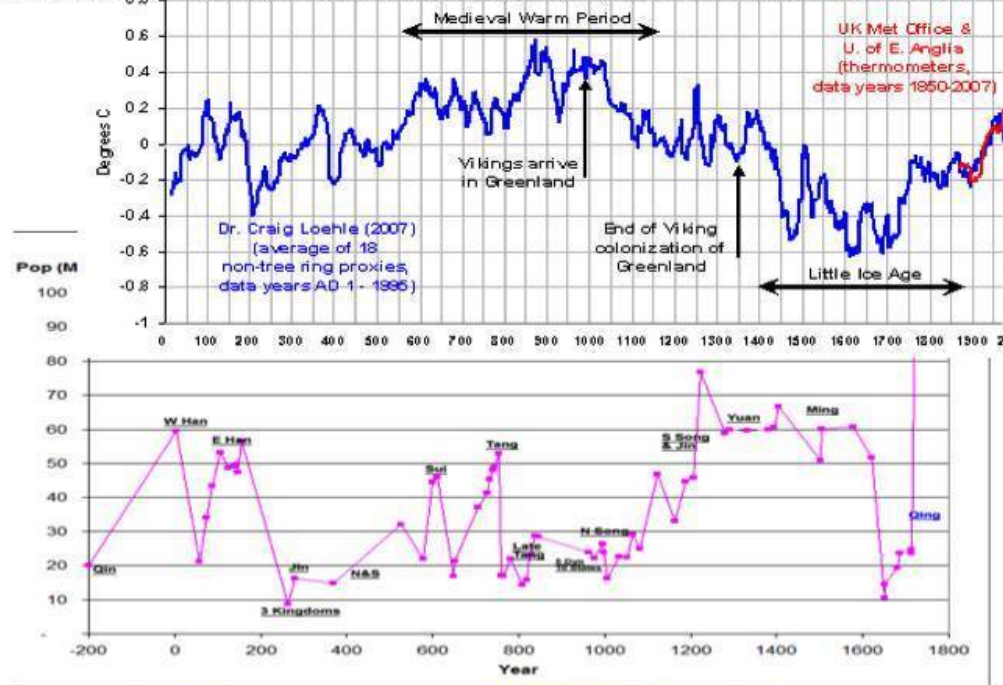

Concentration of the isotopes of carbon contained in annual tree rings and changes in world order

(according to A. Fursov)

In general animals and plants breed better on the territory of Russia when the Earth's rotational velocity reduces. It often coincides with the temperature fall. The same situation can be seen in China after increase of its population.

Average global temperature and increase of population in China

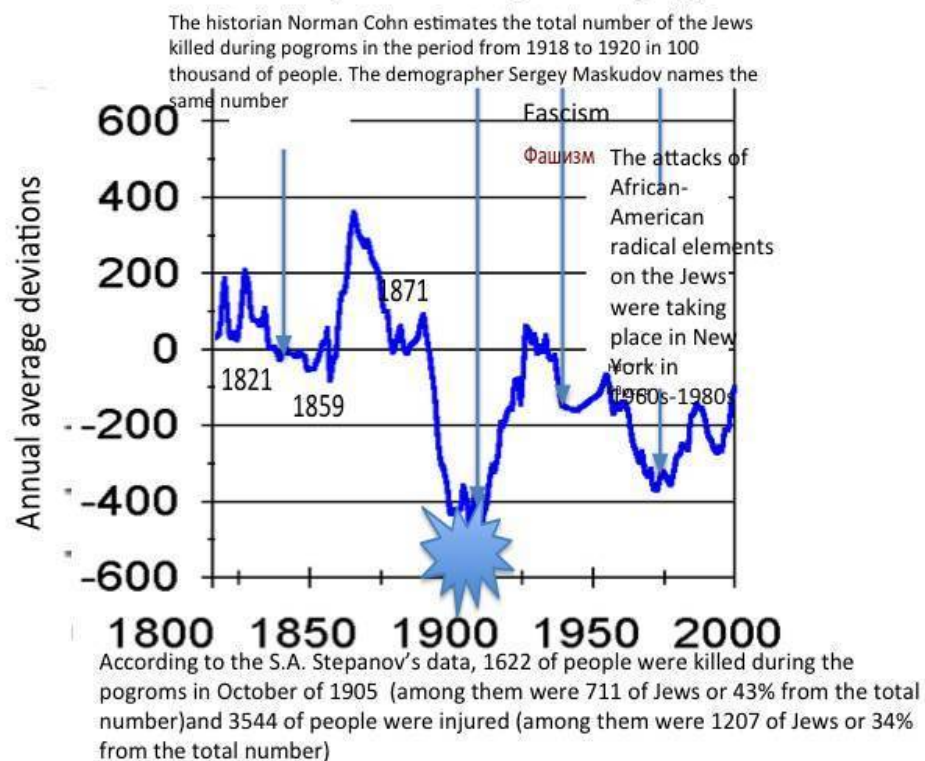

http://ic.pics.livejournal.com/cruseroup/21152339/182661/182661_original.gif

This graph also shows the limits of such relations. In the beginning of 1600s temperature fall reached the critical level and increase of cosmic energies connected with this fall did not compensate for the lack of sun rays. World population began to decrease and the famine and epidemics started.

http://elementy.ru/images/eltpub/revsec_graph5_600.gif

Earth's rotational velocity and Anti-Jewish pogroms in Russia

The relations are the same for the whole world. When the cosmic energies was increasing, the status of the Jewish people was getting worse in European countries.

Terroristic acts, protests, revolutions usually occur during changing of rotational directions and densities of powerful cosmic vortex of the ether. It can be predicted by change of rotational velocity of the Earth, by arrangements of planets and by other methods.

Chapter 2. Psycho-cosmic energies and their influence on terrorism

Terrorism and its victims for many of us is just statistics. For many it is the tragedy.

2.1 Raise of the terrorism: a psycho-cosmic aspect

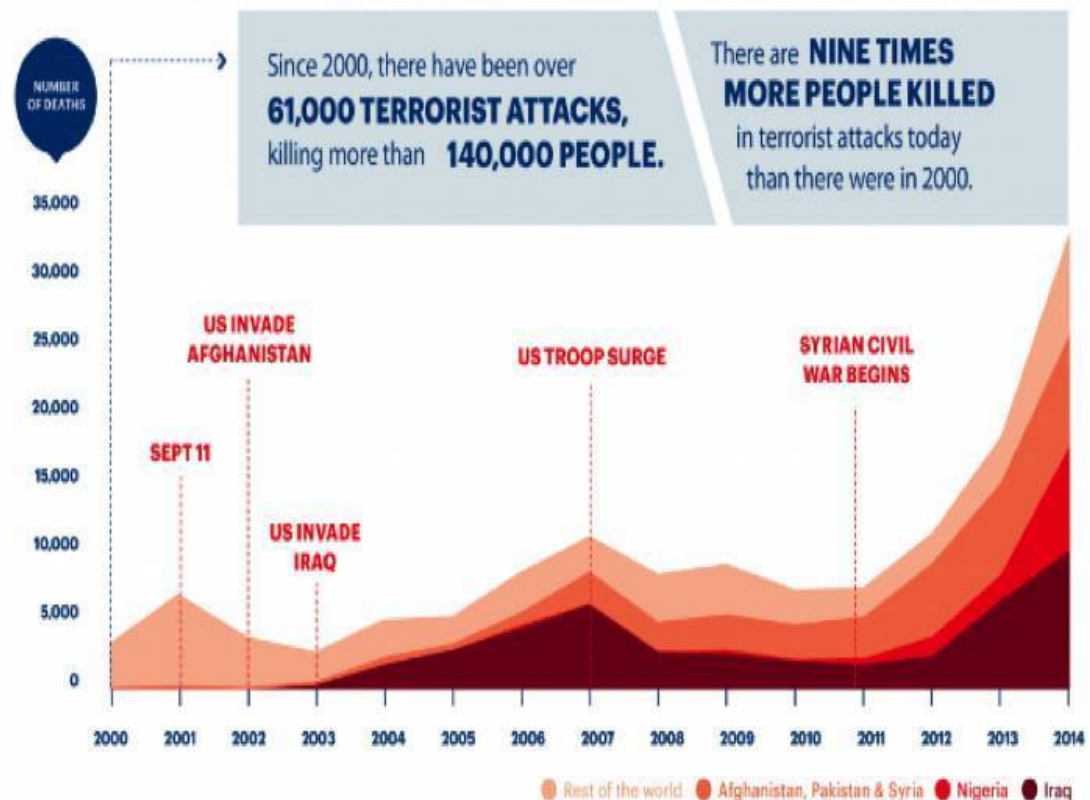

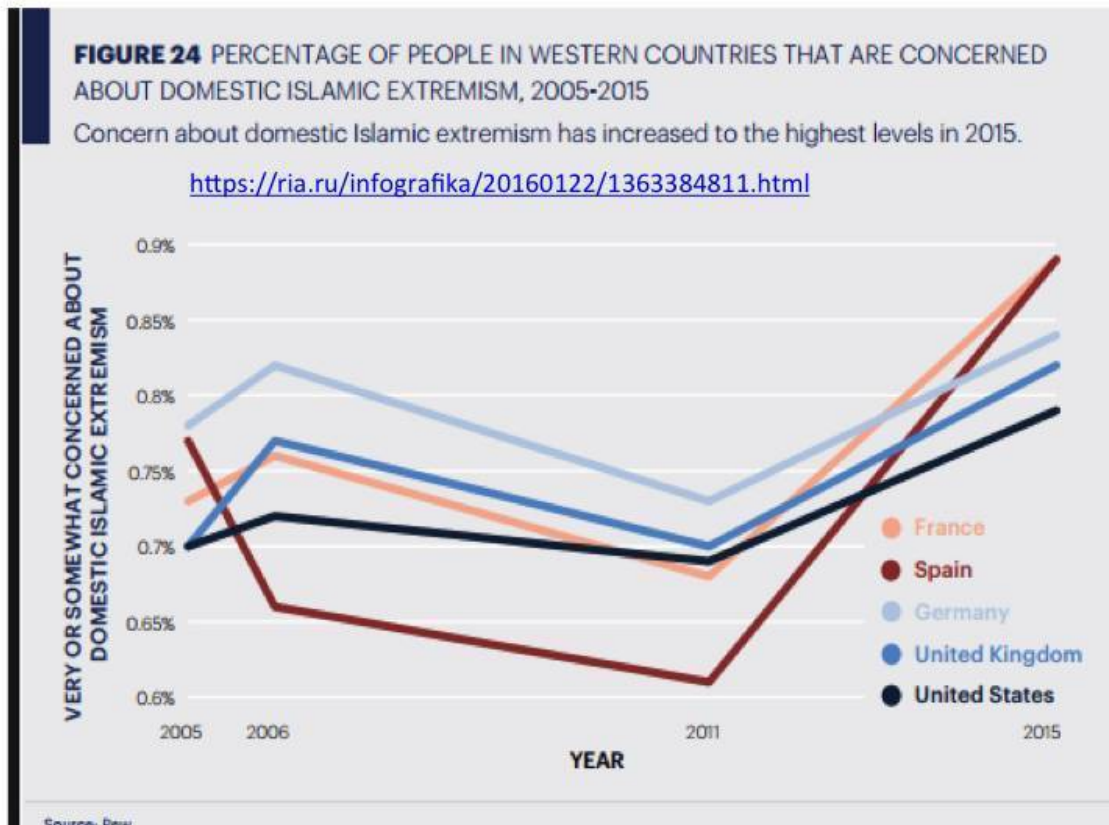

Terrorism has occupied our planet. This is evil, obvious evil, which as a cancer goes wider and deeper in more countries and societies every day.

<http://ru.sputniknewslv.com/infographics/20160325/1098520.html>

From 2000 to 2016 years, it has been more than 72 thousands of acts made by terrorists resulted in death of almost 170 thousands of people, and more than 80% of these acts have been made by terrorists organizations, members of which are full of religious fanaticism of the perversion of Islam.

<https://ria.ru/infografika/20160122/1363384811.html>

If we take a look on Figure we see depress tendencies.

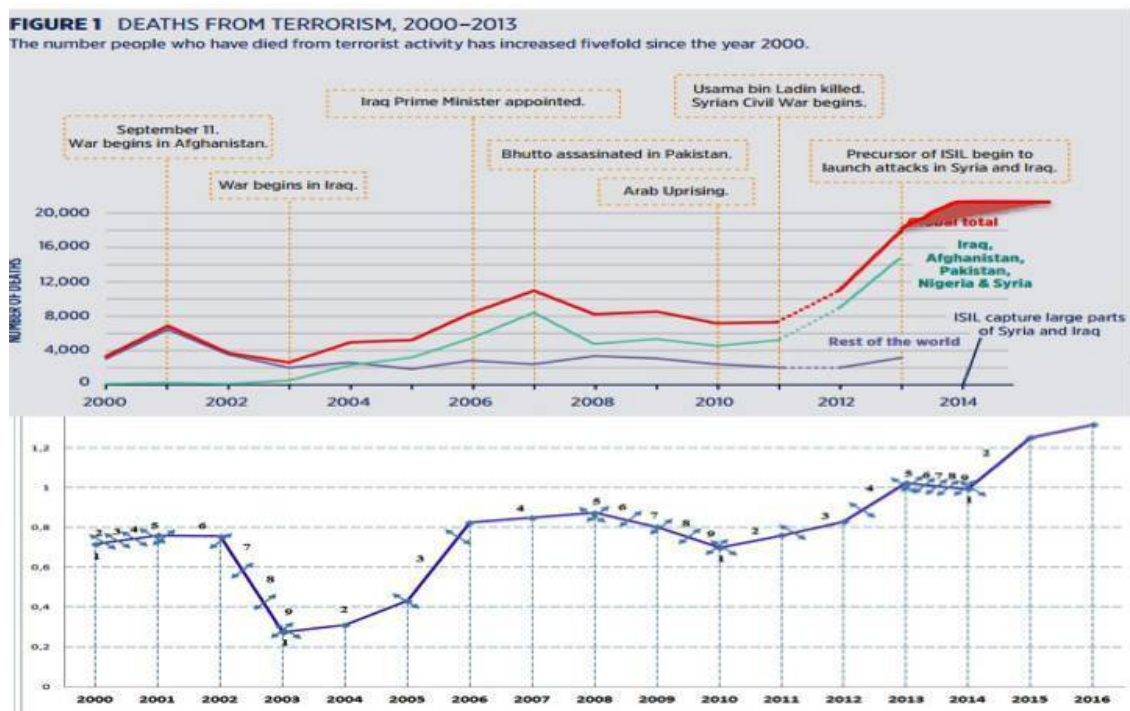

What are the causes of this phenomena?

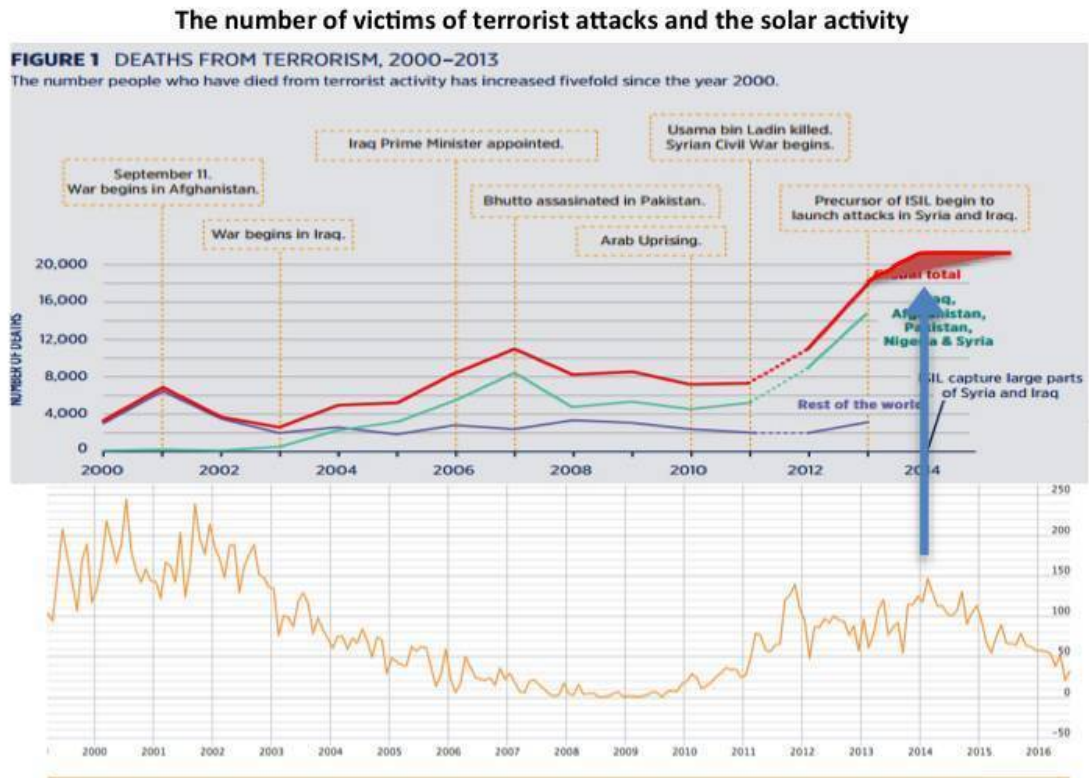

Why, particularly in our days, temps of its propagation have risen?

Before, we have been investigating long cycles of Kondratiev N. And have found that they coincides with change in the length of earthdays, rotational velocity of Earth during decades and centuries. And the velocity of flow, rotation of Earth significantly connected to the density of cosmos. For new physicists it is the density of the ether. The energy of ether vortex “feeds” all living species on Earth. Thus, we have come to the idea to see how energetic flows of the ether are connected with an intensity of terrorism acts. Let’s compare graphs describing velocity of rotation of Earth (the length of earthdays) with the intensity of the acts in recent years.

Change of the length of earthdays and the number of victims of terrorist attacks

Let’s add some data on the intensity of the solar radiation in the electromagnetic range (see.: <http://www.areyou.ru/sun/sun.html>).

The connection of the number of victims with Wolf's number representing the intensity of solar activity is different, in some degree contrary to the connection of rotational velocity (the length of earthdays) of Earth. The causes of this connection on the level of physical processes on the scale of solar system have been explained. (see: Dyatlov V.L. Polarizing model of heterogeneous physical vacuum. Novosibirsk, editing of the Mathematics Department, 1998, 183 pp.). This is the sphere of disputes of physicists and mathematicians. Dyatlov V.L. considers that the gravity-spin and electromagnetic cosmic energies transform into one another according to the law of continuity of complete electrical, magnetic, gravitational and spin current. But this is according to mathematicians, physicists, but we analyze a terrorism as a social and psycho-cosmic phenomenon. Therefore, we take from them only reasonable and sometimes shining scientific terms – gravity-spin and electromagnetic energies. For ourselves, we note that the connection between Earth's rotational velocity and the number of victims of terrorist attacks is deeper, more evident than the Wolf's number.

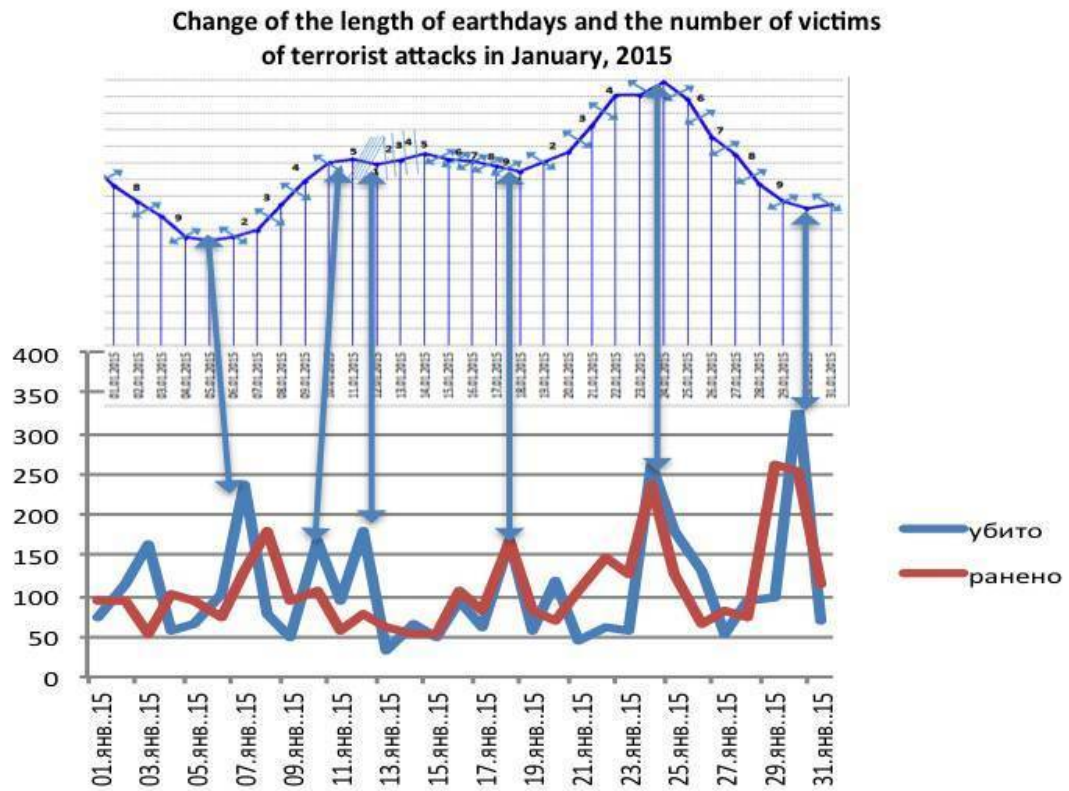

In 2014 43542 people died from terrorists. This surge in fatalities from terrorist attacks is linked to the war in Syria. Only in Syria, there were killed more than 190 thousand of people. According to the Syrian Center of Monitoring Human Rights 33278 people of them were civilians. <http://www.rbc.ru/politics/01/01/2015/54a564b59a7947111c67297f>

In 2015 20378 people died from terrorists. This data is taken from GTD database. It is the most extensive database of terrorist attacks occurred worldwide from 1970. GTD is updated annually. <http://www.start.umd.edu/gtd/contact/>. The length of day is taken from the corresponding laboratory databases. The chart reflects the deviation of the length of day in milliseconds on average values for the entire period of observation. See: <https://www.iers.org/IERS/EN/Science/EarthRotation/EarthRotation.html>

Dependence exists. But in the scale of years.

But will dependencies depend on whether these occur in one day? Let's take the January of 2015.

From GTD we find the number of terrorist attacks per day and the number of victims. Scary figures. Let's plot the number of died and wounded people due to terrorist attacks in this month and connect it with the schedule of the length of earthdays.

We note immediately, that, according to reputable laboratories (see: http://www.tesis.lebedev.ru/magnetic_storms.html?m=1&d=31&y=2015), we have not found the connection of the intensity of magnetic storms on Earth, and the number of killed people in terrorist attacks in the January 2015. But there is the connection with the Earth's rotational velocity.

At all points of the Earth's rotational reverse (in the days of change of acceleration of rotation), the number of victims of terrorist attacks usually jumps. So that the connection in the rotational velocity to the intensity of the attacks have a decadal and individual days' scale.

And the times of a change of the acceleration of Earth are also the days of a change in the density of the ether around Earth due to this factor. Under the acceleration of Earth, it is covered by waves of the ether. Just like the air on a motorcycle rider gaining speed. Physicists have made a model of changes in an ether density at the body's acceleration change.

This also applies to Earth. Only at the approach of a speed of a body to the speed of light, compact ether does not give the body to increase its speed. And Earth moves in the less compacted layers of the ether, and we did not feel it like sometimes we do not feel the air.

You can see this process clearly in the dynamics.

See: A. Kim. The mechanics of the ether and the principle of relativity. . <http://314159.ru/kim/aether.htm>

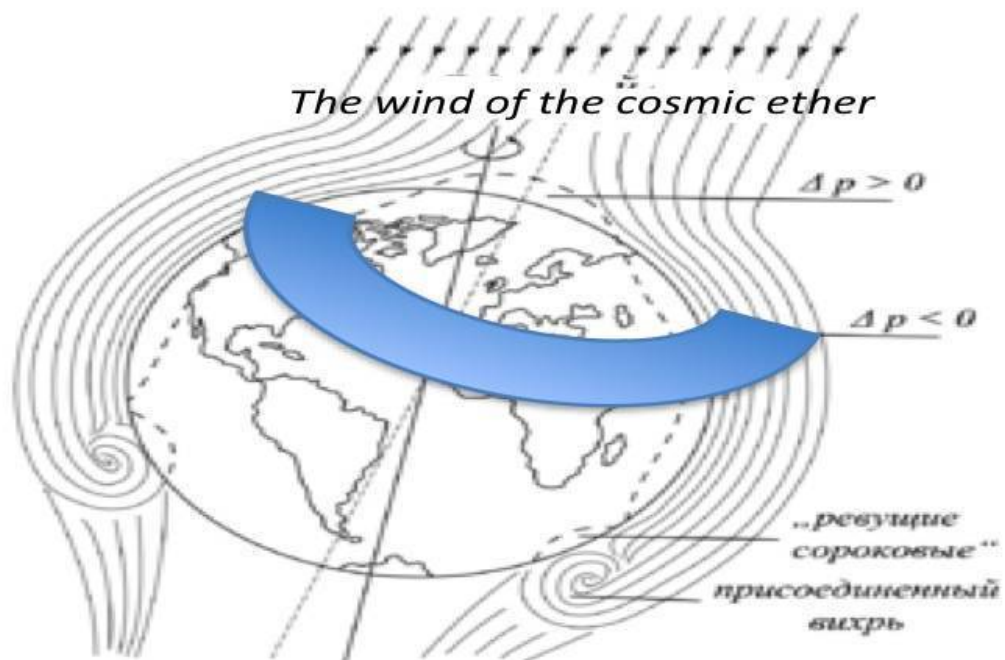

This is an important departure. It shows that the peaks of the attacks at the time of change of acceleration of the earth coincide with the change in the ether density.

According to the physics, streams of cosmic ether coming to Earth from the direction of the Leo constellation, and according to the etherodynamics laws of the flow around Earth. At the same time, in the world there are areas of high and low ether pressure. A density of ether in the world is different. Is it related to the spread of terrorism?

See: <http://ether-wind.narod.ru/glava22.htm>. A wind of the ether: a problem, errors, goals
V. A. Atsukowski // A wind of the ether. Collection of articles / Edited by V. A. Atsukowski. – M.: Energoatomisdat, 1993. – 288 p. – [ISBN 5-283-04990-6](http://www.isbn-international.org/viewdoc/Details?isbn=5-283-04990-6).

We select the diagram zone of low pressure ether on the globe.

**Distribution of the ether wind pressure on the globe
by V. Atsukowski**

https://traditio.wiki/files/thumb/9/9c/Atsukovsky_Ether_Earth.gif/277px-Atsukovsky_Ether_Earth.gif

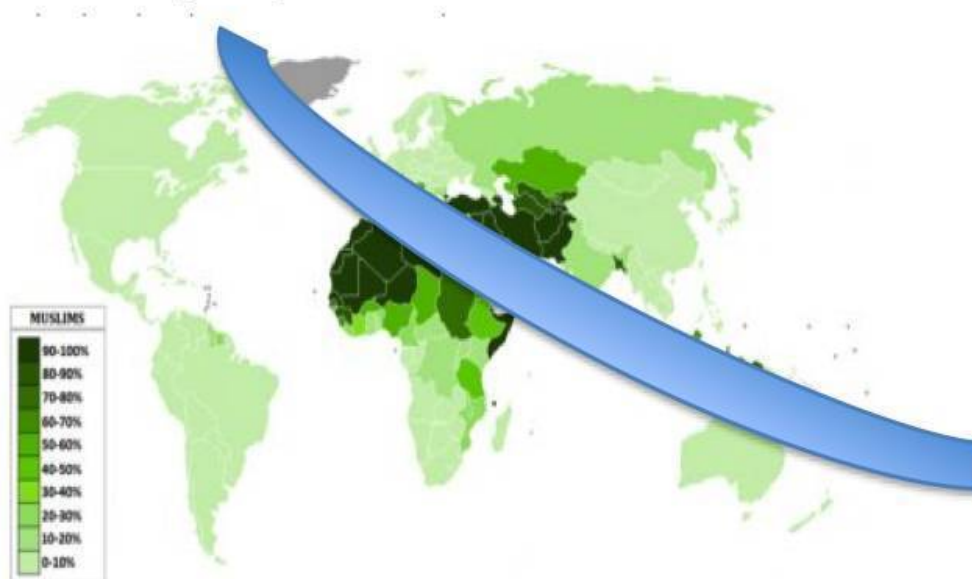

Compare the zone of growth of irregularities in the ether density in the world with places on the map, which marked with the intensity of terrorist attacks. They are the same.

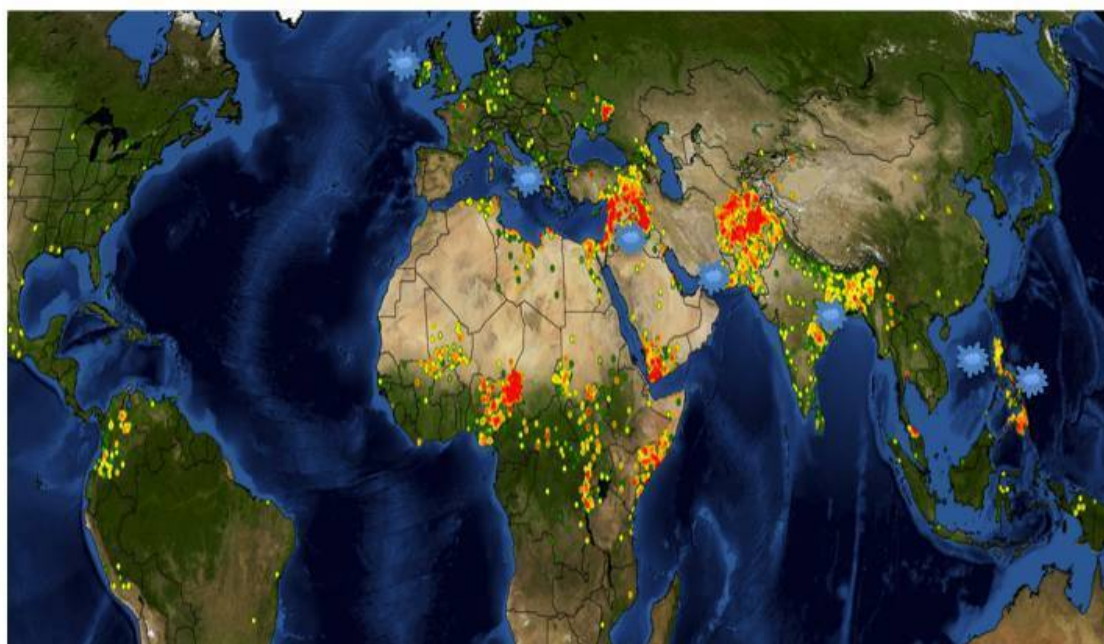

Note that the zone includes a region of a low pressure ether, as well as an unstable region of its pressure. It changes there periodically from a higher pressure area to a lower, and vice versa. Most of the acts of terrorism committed in this zone of an unstable, variable ether flow.

We noted that the terrorism associated with Islamic extremists.

Map of spread of Islam in the world

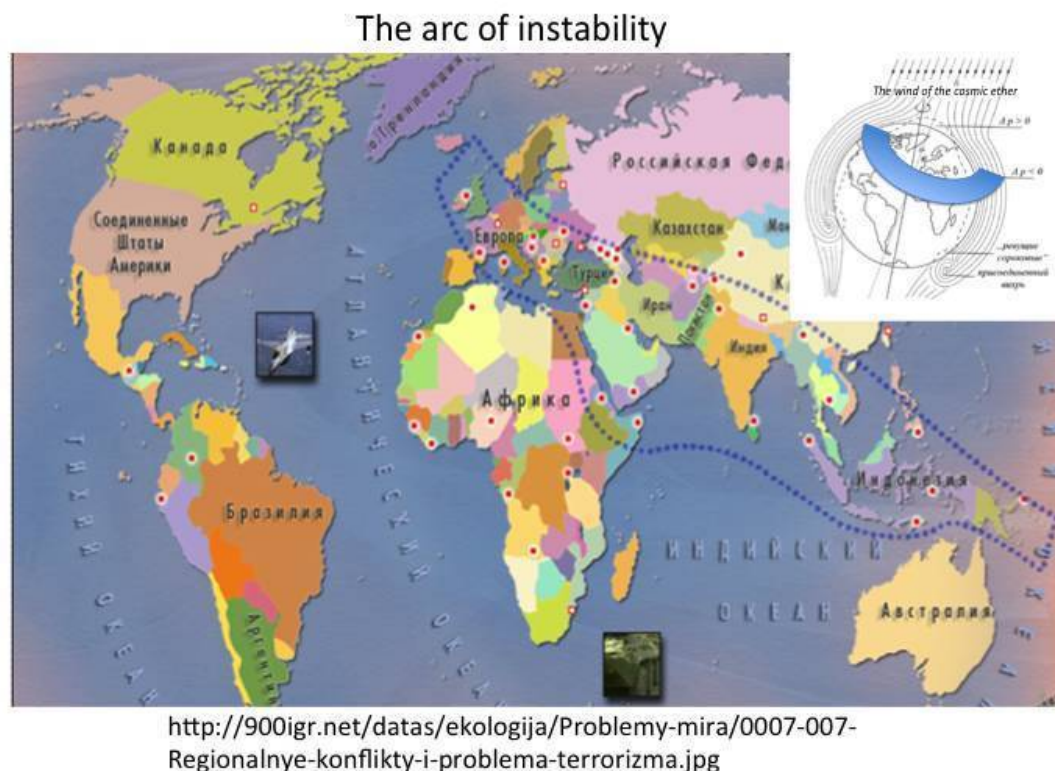

<http://moidagestan.ru/blogs/37290/19290>

<http://moidagestan.ru/blogs/37290/19290>

Yet, there are more coincidences with the spread of terrorism with an unstable pressure zone of the ether rather than with the spread of Islam. Although Islam is prevalent in countries with a similar variable pressure of the ether wind.

<http://900igr.net/datas/ekologija/Problemy-mira/0007-007-Regionalnye-konflikty-i-problema-terrorizma.jpg>

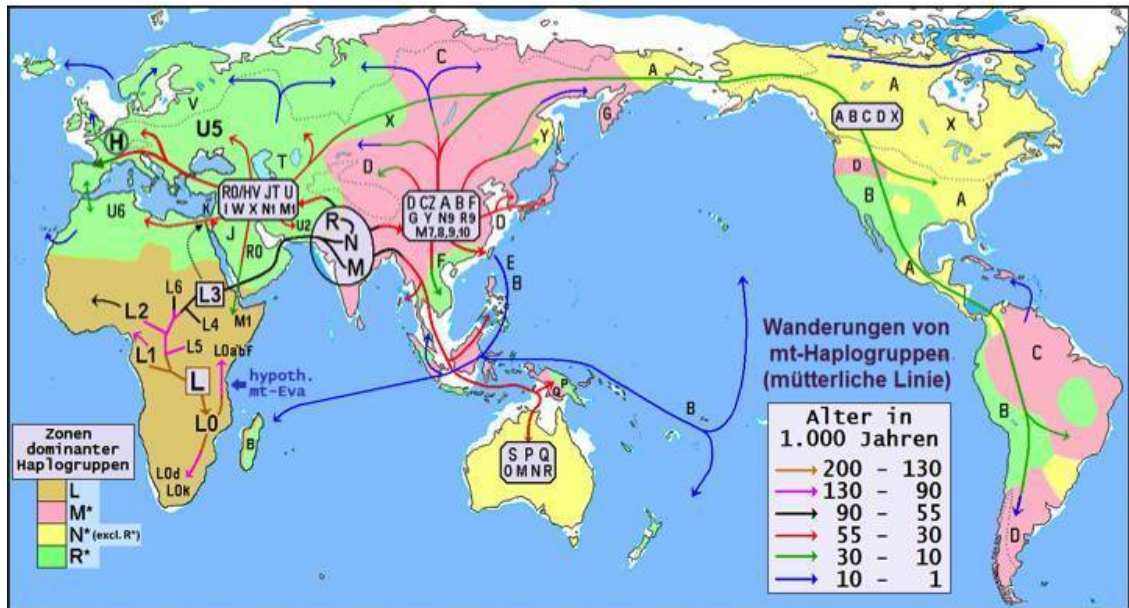

With such a view of Islam, it can be considered as a religion, which is more adapted to the psychological characteristics of people born and raised in unstable conditions and a lower pressure of essential flows. But only.

There are subtle scholars of the Islamic terrorism. Mohaddam F.M. (2011) proves that terrorism arises from the social and cultural conditions of life and features of Islamic societies of the modern world. That is, the low density of the ether pervades the economic, social, cultural, and spiritual life of a society.

There is every reason to link the density of the ether with the global transformation of the culture, people, our history. Terrorism is part of the problem.

Thus, the migration of our ancestors in ancient times is not only connected to climate change, but also to the density of cosmic ether in the world.

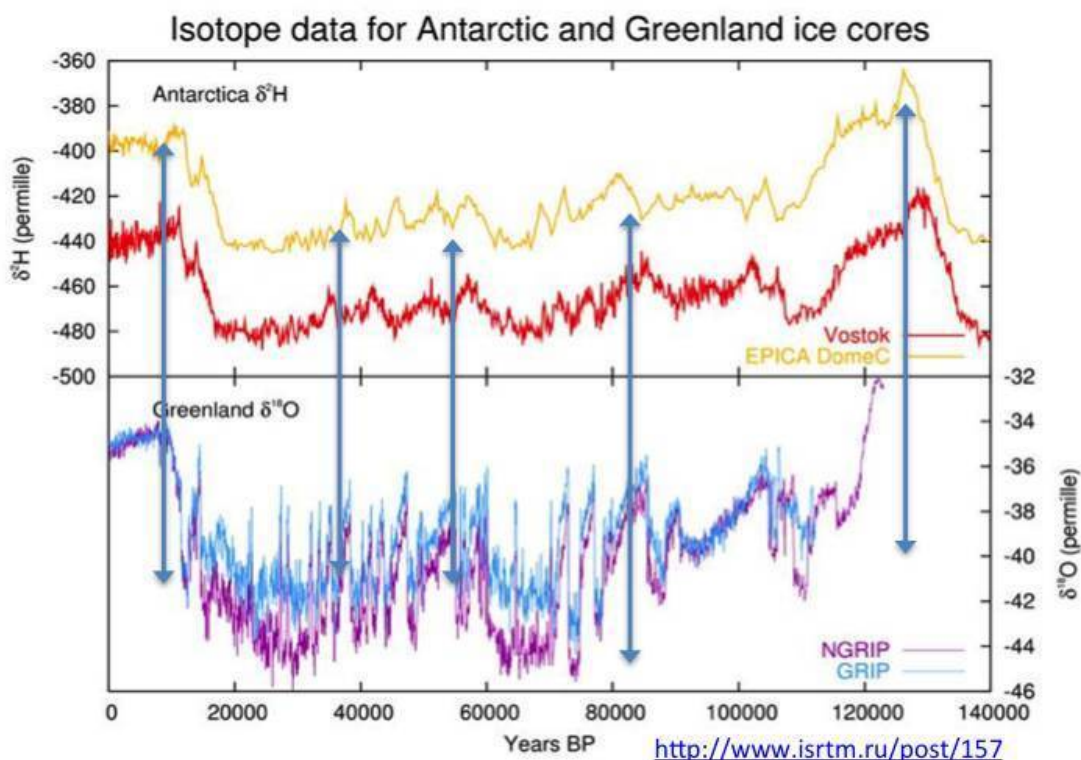

Reconstruction of ancient migrations of people from mtDNA investigations

Juschki based on: Datei des Users Maulucioni:

Migraciones_humanas_en_haplogrupos_mitocondriales.PNG. Wanderung von mt-Haplogruppen von Afrika nach Eurasien

People always migrated to places with denser concentrations of the ether as soon as the weather permitted. A migration usually started under the major changes on the planet, that representatives of the etherodynamics associates with the density of the ether wind. First of all, this is change in the spread of oxygen and carbon isotopes. Arrows indicate the time of the most intense migrations of our ancestors on Earth.

<http://www.isrtm.ru/post/157>

These migrations coincide with a sharp change in the content of oxygen isotopes.

According to representatives of the etherodynamics, a formation of oxygen, carbon and other isotopes is associated with increasing of cosmic energies, including densities of the ether streams. And under the change of these densities, its distribution over Earth and the location of the optimum pressure of space ether zones also change. After the brilliant work of A.S. Holmansky (Holmansky A.S. Vortex structure of the nucleus and the periodic law of Mendeleev. M.: 2016 Federal scientific agro-engineering center “VIM”, Moscow), a relation between formation of isotopes and ether vortices can be considered as proven in the framework of classical physics.

Nowadays, cosmic energies change dramatically with an obvious growth trend.

Are modern humans more silly than their ancestors when choosing a place of residence? People who were born in areas of high and low density of the ether are different, as well as people, who was born in one place, but in different historical periods of high and low density of the ether (Konuhov N.I., 2106b). So, the existence of Hyperborea at Sevres near the North Pole has ether-dynamics causes. There is a place at the North Pole with a very high density of ether flows. Hence there are legends about the superiority of the people who were born there.

Obviously, terrorism is first of all a social and political, spiritual deformation of groups of people, or a society. Countries with higher levels of development of economy and social sphere are less prone to terrorism than countries with serious problems in these areas. Social, spiritual well-being of a society overlaps a factor of lack of the ether in the space today. But the intensity of terrorism, as well as the development of our entire history, economics, has a close relationship with the density of the ether.

Countries in which terrorism is particularly cruel and intense, which have the highest index of terrorism, are located in the considered zone of the ether flows. They are: Afghanistan, Nigeria, Pakistan, Syria, India, Yemen, Somalia, Libya, Thailand, Philippines ...

Accidentally?

Cosmic energies, ether streams penetrate people heads. A whirlwind is at the head of each. Energy vortices recorded, settled in a person from head to toes and heels (they also have a reflection of vortex structures). Long-term EEGs (electroencephalogram) at a distance from electromagnetic interference cities and their comparison with the location of planets, with the non-electromagnetic cosmic energies have shown that people are changing dramatically during these times (planet converts the stream of cosmic ether vortices as they rotate). At a certain combination of cosmic energies (electromagnetic and non-electromagnetic) people are as discarded in the ancient past, our instincts laid bare... And what is there not to have, in our unconscious ... This is a fight for dominance, for power, for the leadership... The need for better organization of a society suddenly revived, a need that until that moment was asleep.

Sometimes people cannot even understand their needs, motives of this level. All of this is forced out from consciousness and even from scientific analysis. We have investigated ourselves very well in scientific researches and in our philosophy of life. Yes, we are the crown of the nature. This is true. But under certain conditions, we fall back on the ladder of evolution and become savages with atomic and hydrogen bombs with the full belief that we are great and spiritual development of the individual. We have the so-called trigger defensive reactions, which do not allow an objective and impartial look at our essence. We emphasize once again: we have it at a certain combination of cosmic energies and other factors change. All in different ways: some cruelly cut the same people with blades, while others give their lives in order to save from this their children, relatives and just good, normal people. Sometimes opposing instincts come to life in a person, opposing feelings and aspirations. This is described in detail and based on, drawing on experimental data, the results of the massive, many thousands of surveys.

Yes, physicists dispute about the presence or the absence of the ether and cosmic energies, of their nature. Let them argue. We have experimental evidence that the increase in the density of essential flows (sharp decline in the Earth's rotation), is related with the peaks of changes in the development of society, people's mental activity. And the most difficult problems of humanity are connected with psycho-cosmic energies, i.e. the part of the spectrum of various cosmic energies that affect our mental, physiological activity. But most importantly: our research has shown that the human brain, our EEG are more sensitive than all the physicists created sophisticated instrument responds to changes in the density of ether flows. Knowledge achieve high predictability when it is the result of the development of various sciences. Therefore, we will not discard and other scientific assessments.

But let's stay pragmatic and remain at the level of common sense and in an embrace with the data of those scientists that measure, record, touch a real phenomenon, and not theoretically soar in the clouds, in speculation, in theories without facts.

The uneven development of a society, the economy is difficult to explain without using the original, proven facts and common sense knowledge about the ether.

Without this knowledge, we cannot explain the reasons for the appearance and disappearance of the long waves of economic development cycles that were empirically fixed by N. Kondratyev and other scientists. Such cycles in the economy used to be – that's for sure. Likewise, they disappeared. Why? The reasons are different. But there is one detail. These cycles, as well as the dynamics of terror coincide up to a year – ten years to the dynamics of change in the density of the cosmic ether. There is other amazing coincidence of changes in the ether density, socio-economic and spiritual processes in the world.

We will not get involved in the discussion on this matter of physicists. There is a fierce struggle of different scientific schools and different types of personalities, classical and new physics. It is quest for the truth and for financial flows, for the status of science, which brings a lot of dividends. Imagine, that some abstract scientists have found their niche in the distribution of financial flows in the system of scientific hierarchy. They were going to it all their lives. And suddenly announced

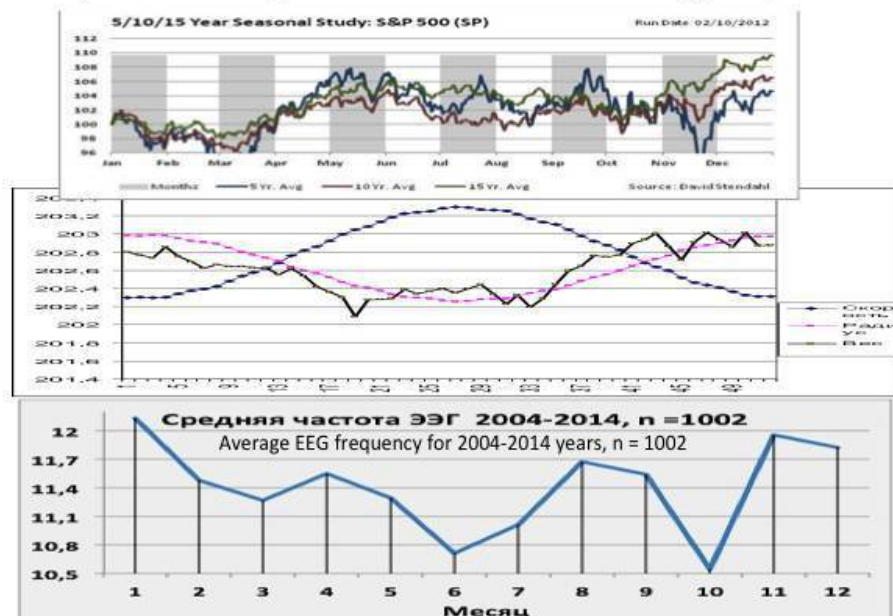

that the foundation on which they built their research achievements are not accurate, not true. So after all, these scientists should be changed to those who hold more promising scientific theories, concepts. And they are all in the opposition... It was not just in the history of science. Let us recall the debate that revolves around that. Earth around Sun or Sun around Earth? What happened to those who declared before the other not accepted at that time by official science and all people?

Let's be pragmatic.

Let's take out only the relevant facts from researches that are apparent at the level of common sense. For instance: if the object moves in an uneven aqueous or gaseous medium, then the sealing and discharge occur in the medium itself. We will build on these obvious truths and common sense. There is the example of logic and diplomacy from A. Poincare ("Science" Chapter X. Physics and Mechanics):

"For us it is not so important whether the ether exists in reality – let it to metaphysics to decide; more important for us is the fact that everything happens as if it exists, and that this hypothesis is useful for the interpretation of different phenomena».

Annual cycles of the S&P 500 index change, the Earth's rotational velocity and EEG frequencies of surveyed in different months for the many years period

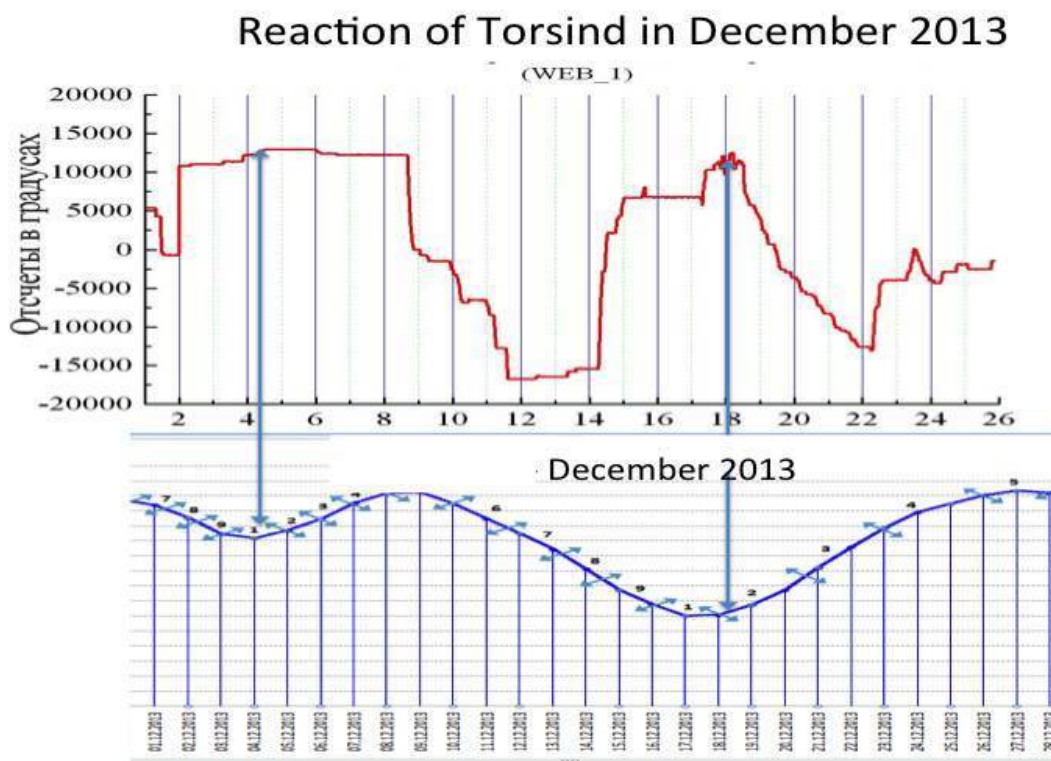

2.2 Non-electromagnetic vortex cosmic energies and people

Physicists have detected and conducted systematic measurements of not-electromagnetic vortex energy. It is found to have both right- and left-handed swirls and to appear at certain positions of planets and Moon. Moreover, the energy is related with changes in rotational velocity of Earth. Comparison of the energy peaks on Earth with electroencephalograms (EEGs) of more than 1000 surveyed, as well as with social processes going on Earth, has shown these peaks to be the most important bifurcation points in people change. Moments related to such peaks often coincide with revolutions, protests, terrorism, unusual behavior of stock markets, and others. We associate the dynamics of the peaks with the dynamics of social and economic development.

Research of A.F. Pugach, G.A. Nikolsky (2009, 2013, 2014, 2016) and other scientists let us link complex social and economic phenomena with non-electromagnetic vortex energy. These scientists have invented and applied unique apparatus to detect the vortex energy coming on Earth. Peaks of this energy most often occurred when three planets (or two planets and Moon) were placed in-line. Soliton waves, the flows of non-electromagnetic gravity-spin energy, were recorded during lunar eclipses, at Venus passing through the solar disk, and in other cases as well. Comparison of results of these studies (comprising several thousand individuals) with a particular space configuration of planets, as well as with Earth's rotational velocity, allowed us to conclude the unusual people reactions on such cosmic energies. There occur changes in EEG, mental activity, type of intelligence, type of personality, and others.

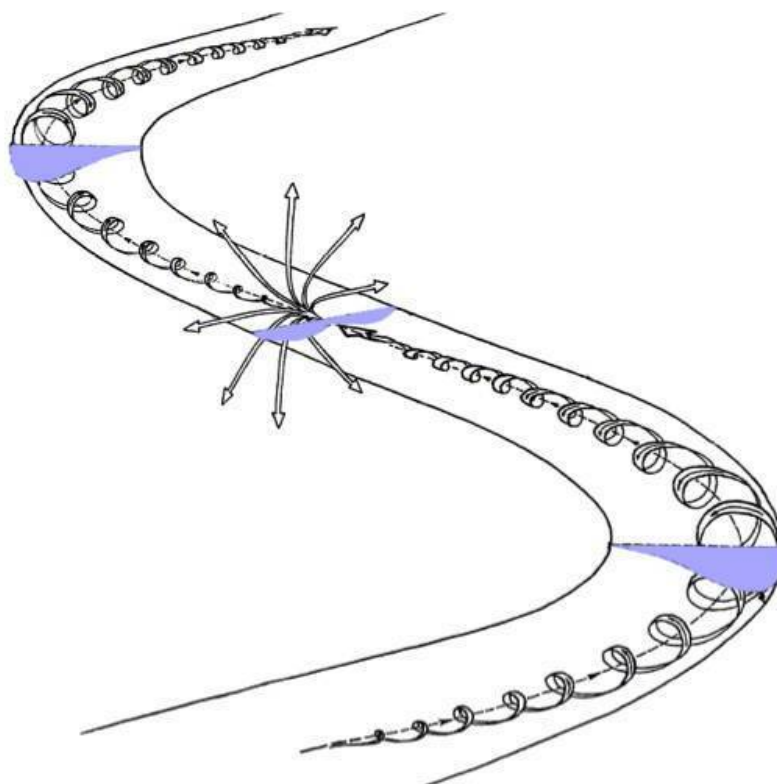

Graphs of reaction of Torsind – the apparatus that measures the energy of non-electromagnetic vortexes – were combined with Earth's rotational velocity and with obtained database devoted to the study of psychophysiological reactions of people, their accentuations, biographies, life successes, and others.

The Torsind graph shows that in December 2013, the moment of transition of Torsind disks rotation from right- to left-hand side coincided with Earth's rotation slowing down. The graph is provided by A.F. Pugach.

Together, this and other graphs show that the change in sign of rotation acceleration of Earth more often coincides with change periods of direction of rotation of the Torsind disk, but not in all cases.

At a point of Earth's maximum rotational velocity, changes the direction of the non-electromagnetic swirls. It is analogous to vortex processes studied by Victor Schauberger on an example of movement of river water.

The graph reflects certain patterns. At first, the water rotational velocity is a spin energy, the energy of rotation. When it achieves its maximum value, water swirls switch direction. At second, the vortex frequency at the switch point is maximum.

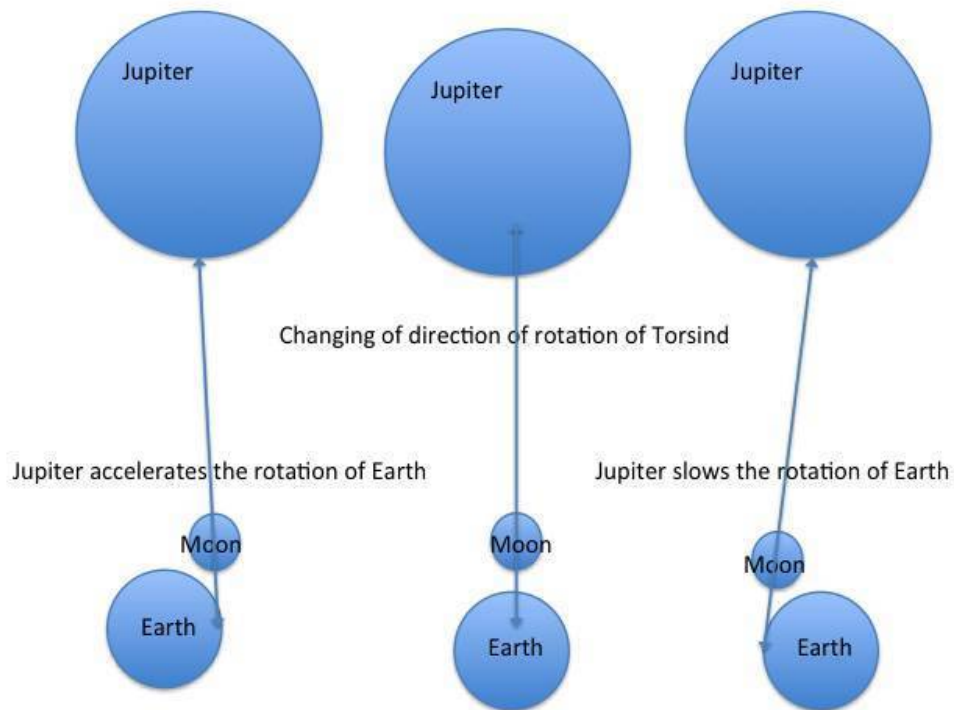

In opposite, at the turn of flow, when the velocity of water flowing decreases, the vortex frequency becomes minimal, the swirls literally disappear. Further, the velocity starts to grow. Then, what is the reason for this to happen? The reason is attractive gravitational forces.

At moment of maximum velocity, water flowing follows mostly the laws of vortex changes. At minimal force of swirls – water flows mostly according to the laws of gravity. At high speeds, the laws of water flowing are determined by vortex processes, and at low ones – by gravity. That is, the ratio of gravitational and spin energies is changing cyclically.

Using the Torsind, the spin energy was detected on Earth in a moment, when planets were accelerating Earth's movement through Moon. In the absence of such acceleration the Torsind stopped moving.

One of the forms of the non-electromagnetic vortex energy – soliton waves – was systematically recorded by G.A. Nikolsky. These vortex non-electromagnetic energies often emerge at lunar eclipses. According to Nikolsky, Moon stands in the way of swirls of the non-electromagnetic solar energy and projects it on Earth.

By the laws of swirls formation, the spin energies should be at their maximum values at the peak of rotational velocity of Earth. In opposite, at Earth's minimal rotational velocity, the spin energy switches to the gravitational one that achieves here its maximum value. Let us clarify this graphically.

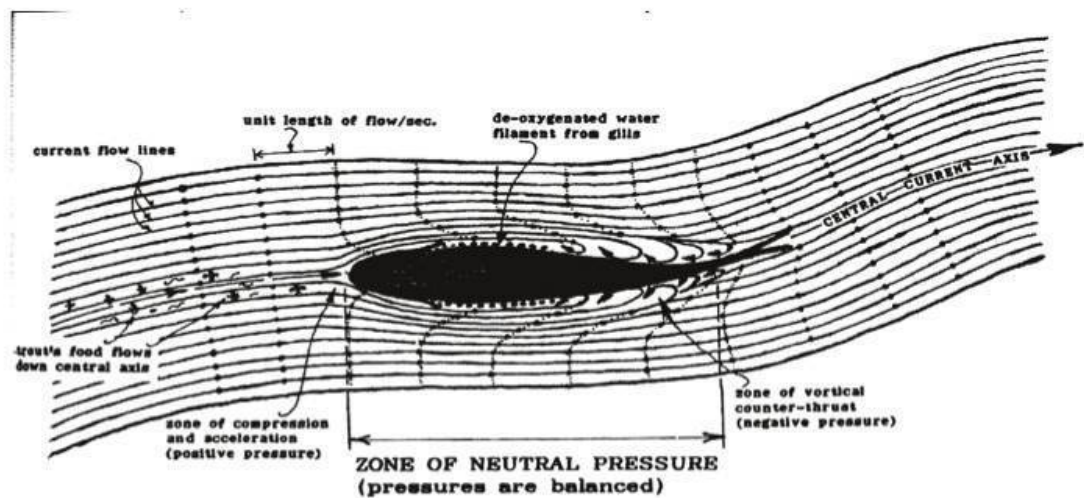

Moon, depending on location in-line among great-size and other planets, and absolute value of rotation, can either slow down rotation of Earth, or accelerate it.

If Earth is on the gravitational line, say, Jupiter-Moon-part of Earth, which rotates towards Jupiter, then the rotational and attractive forces add, and the rotational velocity of Earth increases.

So it was on December 18, 2013, when the Torsind fixed a transition from right- to left-hand rotation.

Why? Let's refer to the experiences of Viktor Schauberger. He observed that the vortices arise in the rapidly flowing river. They can move round stones from the ground surface to the top.

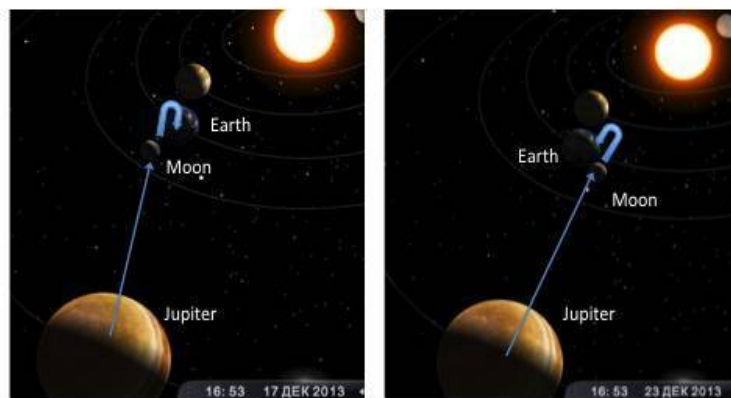

Fish form helps it to capture these vortices, and with their help it is easier to move against the river.

http://theartofnature.org/sitebuildercontent/sitebuilderpictures/callumc_diag01.gif

http://theartofnature.org/sitebuildercontent/sitebuilderpictures/callumc_diag01.gif

Vortices help a fish to absorb atoms and molecules of oxygen better, helping it to move upstream. Vortices are as screwed into the body of a fish. Moon as a fish head may transform the vortex ether flows into smaller eddies which will accelerate or retard the Earth rotation, depending on its location. We look at the diagram given by Atsukovsky V.A. of the ether flow on Earth. These vortexes called connected vortexes. However, similar vortexes appear on Moon and other planets. And they are already pushing Earth. This vortex of Moon is pushing Earth like a whirlwind from a fish head pushing her torso.

Depending on the rotation of a fish head, vortices, that push it forward, can move more towards one side or another of a fish. Energy is a huge – it even moves round boulders in the river against the current. The faster the flow, the heavier round stones it can move to the top. Moon is moving in an orbit around Earth performing functions similar to a rotations of the head of a fish. It concentrates the ether turbulence that helps the rotation of Earth, or inhibits it. Change in the velocity of Earth might be like due to the influence of ether vortices, or due to the influence of gravitational forces. According to some scientists, it is almost the same. The coincidence of changes in the Earth sign of the acceleration with changes in the direction of the ether vortices is associated with bifurcation points in the physiological, psychological, social activity of all life on Earth, including humans. In most cases this coincides in time. The reason is established special resonance in the solar system. See: Khlystov A.I., Klige R.K., Sidorenko N.S. Resonance of the third kind in the solar system. Sagitovskie chteniya, 30 – 31 of May, 2011 (Sternberg Astronomical Moscow State University) "Modern problems of earth sciences and the study of the solar system", 2011.

<http://lnfm1.sai.msu.ru/grav/russian/life/chteniya/sagit2011/Hlystov2011.pdf>

Place of Moon – fish head – can be occupied by any planet close to Earth.

If it is located on the gravity line, say, Jupiter – the moon – part of Earth, which rotates in the direction of Jupiter, then there is the addition of power rotation and the force of attraction, and Earth's rotational speed increases.

It's easy for perception, speaking in an understandable way. However, a simple problem is complicated by formulas thoroughly. They are not simple. We will still talk about the facts.

All as described was observed on December 18, 2013, when Torsind recorded the transition from the right-hand to the left-hand rotation.

And what was on Earth in that time? Euromaidan was in a full swing in Kiev. Here is the press report dating to December 18, 2013: “On the Independence Square in Kiev, Ukraine's

euro-integration supporters are building new and strengthening old barricades". rus.azattyq.org/a/25204975.html

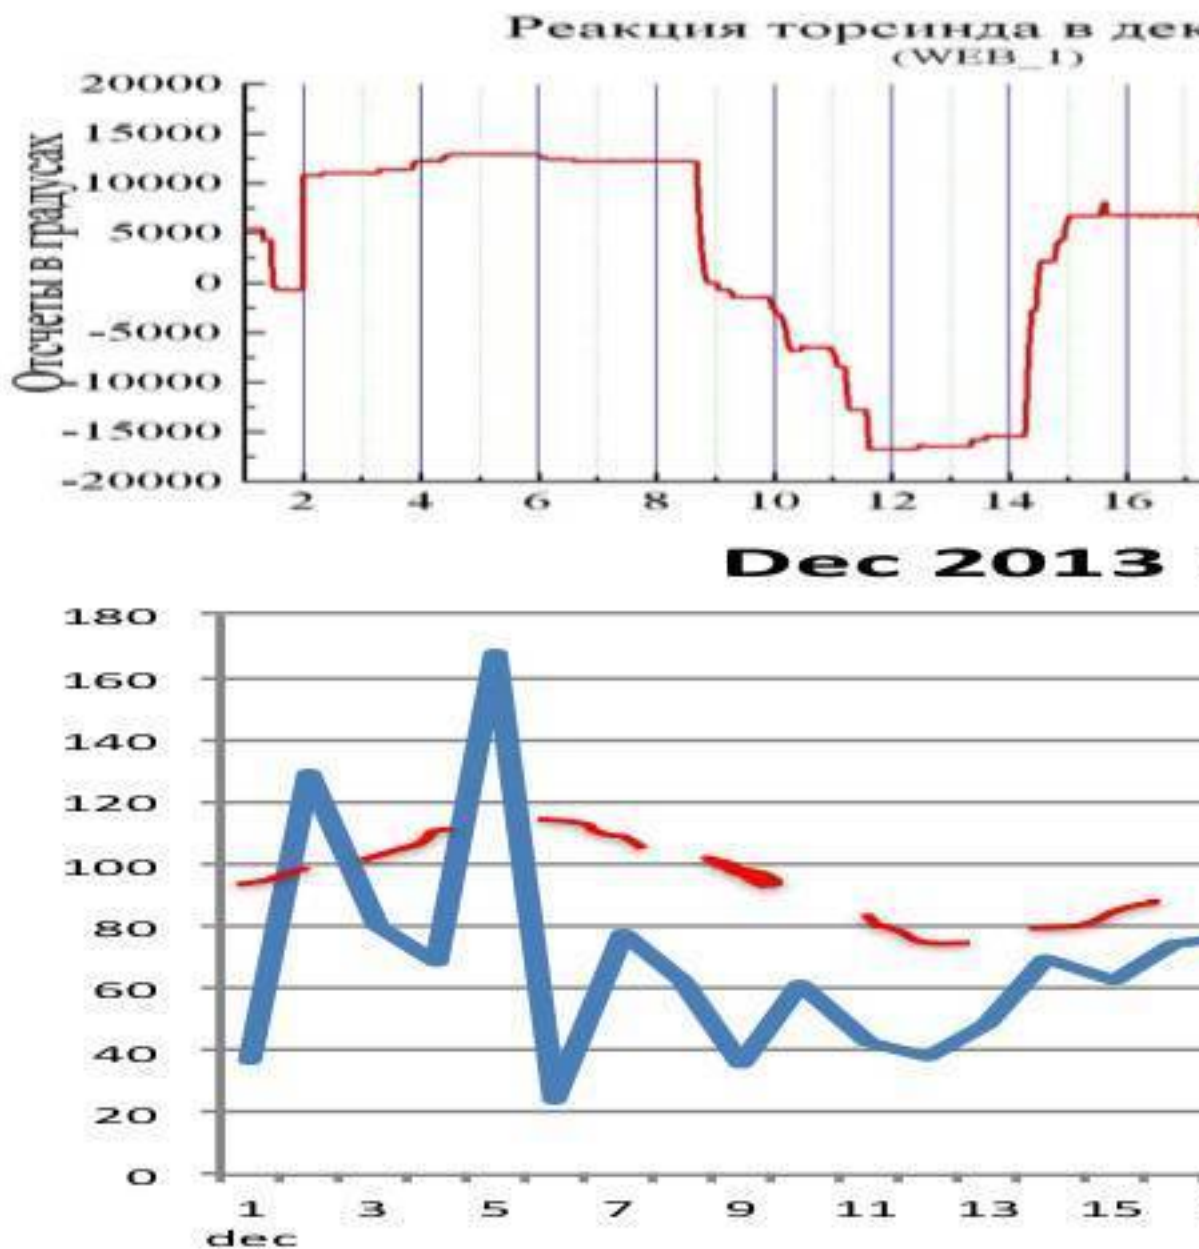

Protests began as well in prosperous European countries. Exactly on December, 18, thousands of people came into streets in Austria and Italy. They were protesting against the economic policy of the authorities. It was not easy in France as well.

The following is noted in the Internet on the 18 of December: «Farmers in France have risen! At least, these titles should flaunt on editorials of European newspapers. Compared with what is happening now in France, the barricades in the center of Kiev seem to be just fun in the sandbox". <http://www.odnako.org/blogs/krizis-vo-francii-buntuyut-fermeri-i-melkie-predprinimateli/http://topwar.ru/37358-vtoroe-lico-evropy.html>

It is rather difficult to estimate the activity of terrorists considering only one single day. Entrust the overall assessment of the special services of Israel:

Their opinion: «This week (from 17 of December) in different areas the increase of terrorists' activities has been observed». Such cases are given in <http://www.terrorism-info.org.il/ru/article/20604>.

We counted from the GTD database how many people died because of the terrorist attacks in the world in December 2013. Conclusions made by Israeli special services were confirmed: the number of deaths due to terrorist attacks increases from 13 December. But before that, on December 11-13, Torsind was like frozen. The number of those killed in these days by terrorists is minimum.

And this is not an accident. The collected statistics shows the unique relationship between terrorists' birth, their terrorist acts and the intensity of gravity-spin energies.

On this day, the price jumped for all main shares.

The [Dow Jones Industrial Average](#) rallied 292.71 points, or 1.8 percent, at 16,167.97, surpassing its Nov. 27 record.

The [S&P 500](#) rose 29.65 points, or 1.7 percent, to 1,810.65, also a record finish. Health care led gains that included all 10 of the S&P 500's major sectors.

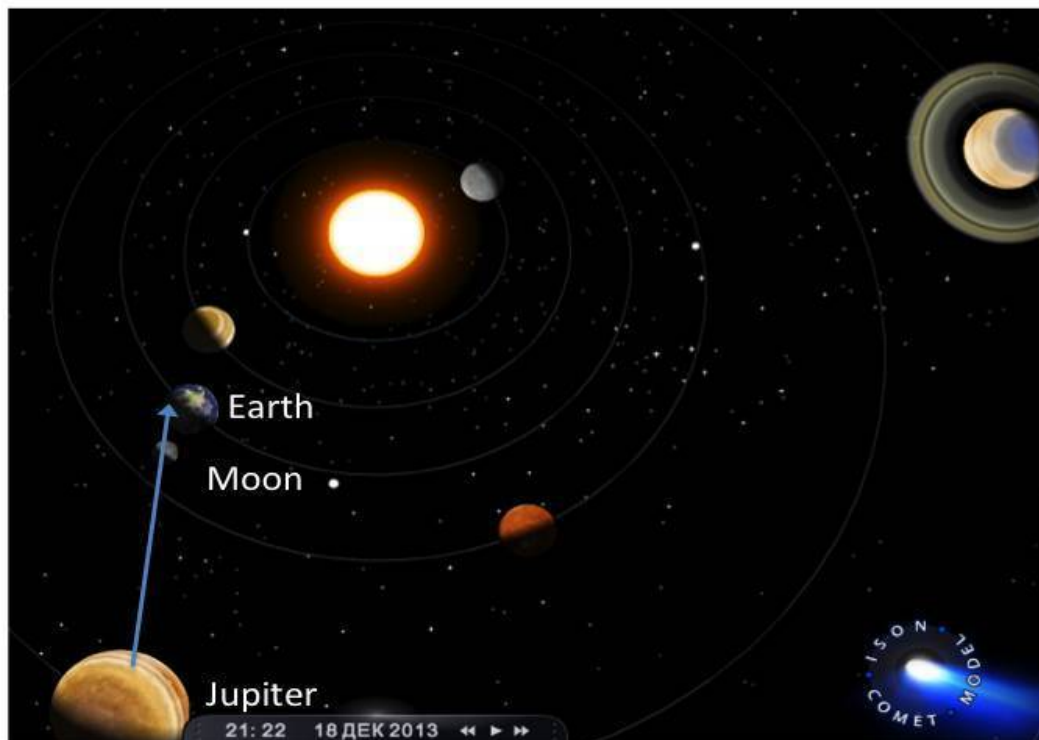

The [Nasdaq](#) jumped 46.38 points, or 1.2 percent, to 4,070.06, finishing at a 13-year high.

See: <http://www.cnbc.com/2013/12/18/us-stocks-open-mildly-higher-in-waiting-for-fed-decision.html>

And this is not an accident. Dependencies of stock market movement on gravity-spin energy have been analyzed systemically. The knowledge and techniques can be improved in the accuracy of prediction of share prices (see: 13).

Many sports records have been established this day. See: http://www.molsport.ru/news_date/2013/12/18/2452/. And even a new Guinness record in lifting weights. See: <http://pravdasevera.ru/society/-5y9arvgp>. And this is not an accident too. System analysis of the outstanding sports achievements showed that the most times they have been installed at the considered position of the planets being analyzed.

Gravity-spin energy usually grow at the following a position of the planets: See: <https://space.utema.ru/sss/>.

However, not always the location of the Earth in one line with the Moon and other planets, even great, due to the change of direction of rotation Torsind with corresponding cosmic energies.

At the lunar eclipse on March 9, 2016, such soliton waves have not been observed as usual.

This is the location of the planets and the Moon before the eclipse.

Neither the sun nor the Jupiter at that time did not change the speed of rotation of the Earth through the Moon. Spin energy was not fixed by Torsind.

These reflections need to answer the question: when critical changes occur in our psyche when changing the Earth's rotation? On the peaks, crevices such changes cause revolutions, protests, terrorist acts ... Here is the data at the beginning of 2016 about the mass protests in France. Below is police data.

March 9 – 224 thousands of protesters.

March 17 – 150 thousands.

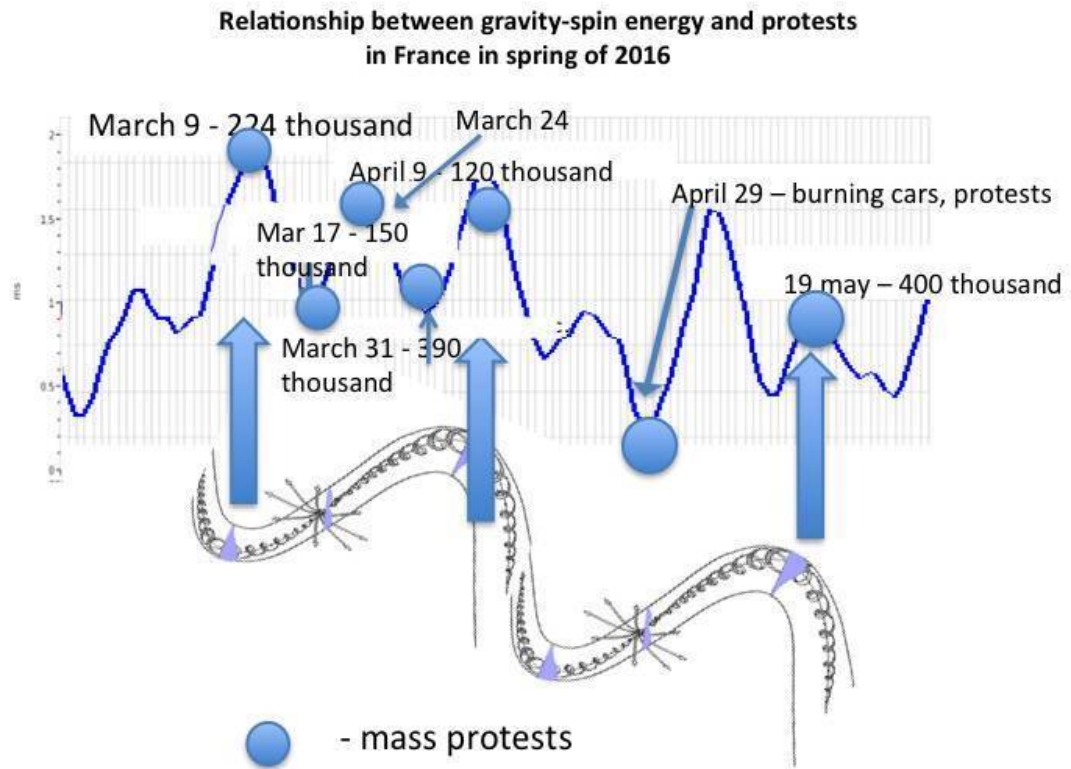

March 24 – there is no exact data.

March 31 – 390 thousands in Paris (in the whole France about 1 million).

April 9 – about 120 thousands for the whole France (in Paris, about 20 thousands people).

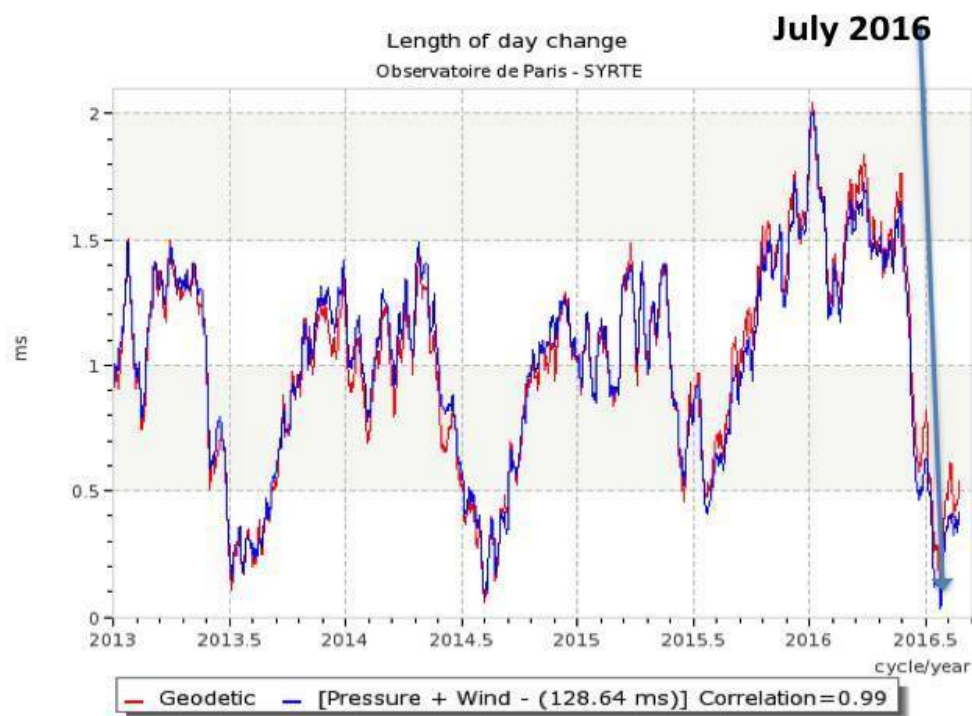

April 29 – burning cars, protests.

May 19 – 400 thousands of protesters.

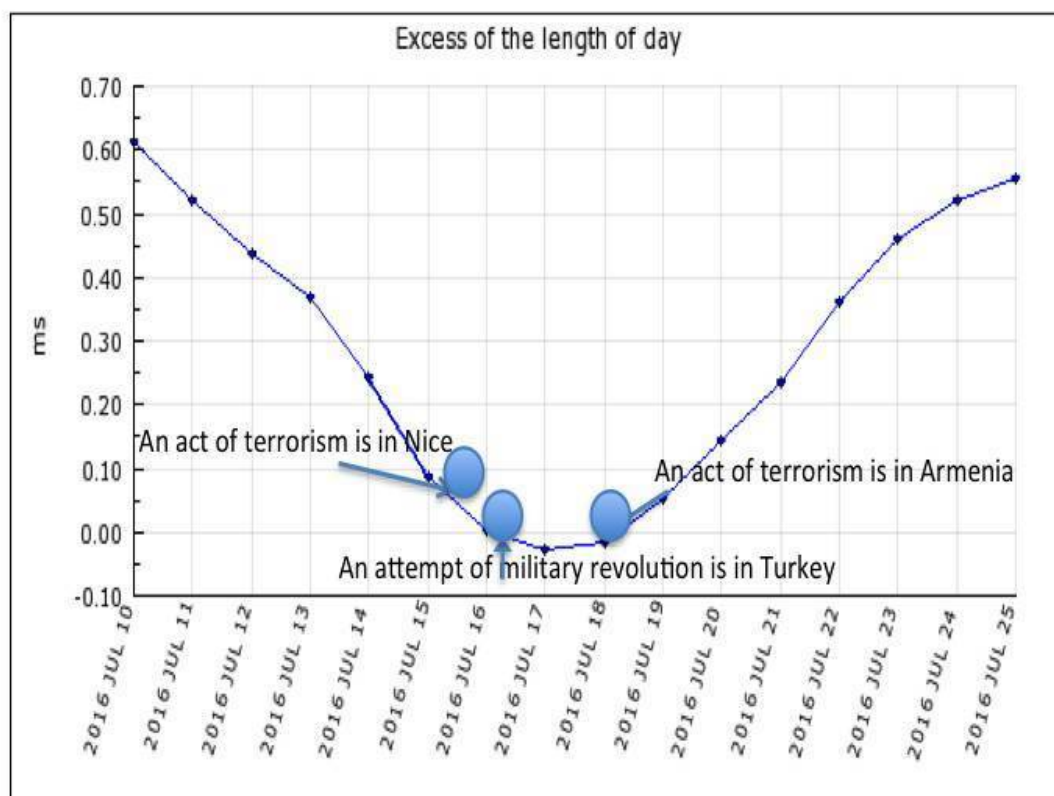

When the length of day (LOD) on the graph goes up – the length of Earth's day is increasing, the Earth's rotation speed drops. When the curve of the graph goes down, the Earth's rotation speed increases. But the most important is the point where the change in the ratio of gravitational energy and spin.

In July 2016 there was a dramatic change in the Earth's rotation.

This sharp increase in the Earth's rotation has not been in recent years.

We approximate that of the graph c marked the most important protests at this time in the world.

Occasionally?

You can express different hypotheses. But there is a system of facts, more than 1,000. Their EEGs, personal, intellectual qualities are changed at the time of building a parade of planets, and the appearance of the vortex energy. We become other. In some conditions it promotes the growth of the rate of social and economic development, in other – revolutions, protests, terrorist acts ... (See: 2).

Important: a comparative analysis of the results of psychological testing and measurement of EEGs (electroencephalogram people) shows a direct relationship of these results with gravity-spin energies on the Earth.

And why during setting planets in one line?

Vortices are being demolished in the direction of motion of the gas, fluid, ether. Vortices arise in the air. Wind alternately separates the right and left twisted vortices.

Temperature is usually different in the center of the vortex from that around. The more curled vortex is, the lower generally its temperature and pressure are in the center.

<http://www.avkokin.ru/documents/601>

The figure shows the vortices and the temperature in the Gulf Stream area for the period from April 29 to May 2, 1982. W and C are anomaly warm and cold water. There are also arrows of prospective currents. (Kamenkovich, Koshliakov, Monin, 1982).

Gulf Stream itself makes waggish movements. According to the hypothesis of Heland -Hansen and Sanstrom, these anomalies have different directions of rotation. Cold zone associated with anticlockwise motion.

By similar paths of Carman also the solar system is riddled.

If the body is circular and rotates, it twists even more intensive air vortices of fluid. The ether has similar properties. Note also, that periodically occurring vortex shedding at different twist: left-handed twist changes to a right-handed. Strictly alternately.

In these vortices of the ether we become different. In some conditions, it promotes the growth of the rate of social and economic development, in other – revolutions, protests, terrorist attacks.

Important: a comparative analysis of the results of psychological testing and measurement of EEG shows a direct relationship of these results with gravity-spin energies on Earth.

Note also, that when a wind power is maximum, the vortices are located close to the line. Once the energy of vortices falls – they, scattering, are moving away from the line and are positioned perpendicular to it.

Let us ask ourselves the question whether we would see these vortices, such phenomena without air vapor? And air is invisible and infinitely small. It has the properties of an ideal fluid.

But most importantly, the impact on the psyche of people ether has through a swirling motion. And it is more intense at the location of the planets, space bodies on the same line.

<http://www.evgars.com/1/95ACAG1O19BR0001.jpg>

<http://www.evgars.com/1/95ACAG1O19BR0001.jpg>

The more powerful the tornado energy, the vortices, the more likely they are aligned in a single line. With the loss of energy, the vortices become large in diameter and lose linear construction.

Something similar happens when moving, rotating planets. But the vortices of the ether around the planets are not visible, but in the atmosphere there are analogs. Since the temperature inside the vortex is lower, condensation of water, formation of steam, clouds occurs. They are visible.

2.3 Psycho-cosmic and psycho-physiological causes of terrorist attacks and protests: the EEG investigations

2.3.1 Methodology

Books (2015, 2016, 2017)) are dedicated to the experimental data on the change of people under the influence of ether vortices, which are built into the Carman track when planets are in particular position. Solar electromagnetic (Wolf number) and gravity-spin (rotation of the planet) energies affect people together. The largest deviations from the usual behavior is observed at the maximum of electromagnetic and gravity-spin energies. Different planets affect our psyche, psycho-physiological activity in different ways.

It is concluded that *the strong magnetic storm activates the ancient parts of the brain of human. But exactly the same impact is of torsion fields of Saturn. So, strong coincidence of gravity-spin waves from Saturn and high electromagnetic activity of the brain throw us on the evolutionary ladder far*

back. We lose our ability to regulate activity of later parts of the brain, and fall into the influence of the limbic system.

When there is no severe stress, or magnetic storms, then human physiology (the work of the heart, brain) is in the service and under the control of the cortex, the frontal parts of the brain. ECG rate has positively associated with the frequency of the galvanic skin response (GSR). And in this situation, the left half of the brain is often more active. From this, EEG, especially reflecting the activity of the left-frontal sections of the brain, in normal circumstances is positively correlated with the frequency of the ECG. But under stress it has a negative correlation. Cora, left-frontal parts of the brain in these cases, are like they were disconnected from the control and regulation of the deep structures of the brain functions. And we are moving to a more ancient mechanisms of physiological activity regulation. The energy that was in the "feeding" the left-frontal sections of the brain and the whole crust is redistributed at the first physiological needs (heart, breathing, etc..).

But at the same time it has been found that the gravity-spin energy from a number of planets, especially Jupiter, increases a creativity of people.

Changes in the activity centers of the frontal and occipital brain regions, the left and right halves of it, is linked to the development of creativity in humans. At various cosmic energies, may enhance a desire for a creativity, or a desire for standard decisions, a formation of conditioned reflexes, dynamic stereotypes.

According to our data, at the successful solution of creative problems three EEG effects are observed.

- 1) In most cases, right hemisphere of the brain becomes more active.
- 2) There is a growing frequency of the EEG.
- 3) There is a growing difference in frequencies between the frontal and occipital brain regions.

The same effects are observed when we survey the people who intuitively feels well other people, even at a distance.

Finding Earth aligned with the giant planets and another with one of the planets or moon changes the EEG frequency and distribution of the activity between the frontal and occipital, right and left hemispheres of the brain.

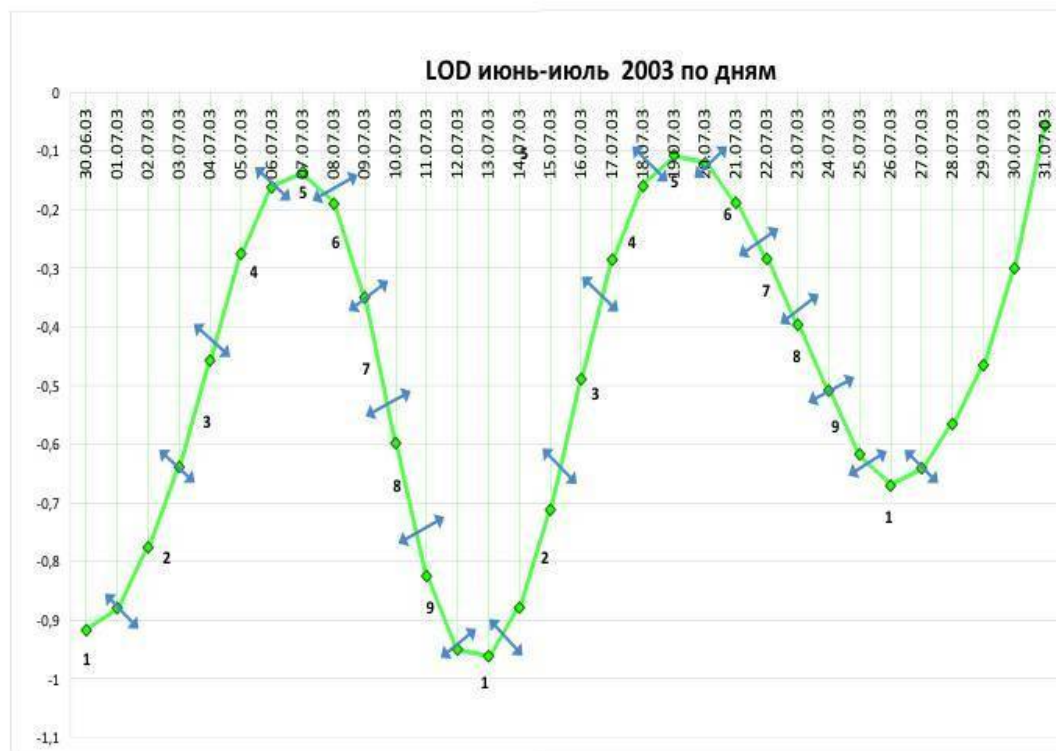

And when the influence of Saturn is replaced by the influence of Jupiter at a high-intensity electromagnetic energy of the sun, then there are cardinal changes in people.

Entering of the solar system, or Earth in denser energies of the cosmos dramatically affects not only all natural processes on Earth (weather, volcanic eruptions, the movement of the magnetic poles, and others.), but also on a physiology, a psyche of people. Studies have shown that the human EEG interacts and substantially depends not only on their personal-intelligent features, on the outer Earth's environment, but also on gravity-spin electromagnetic and cosmic energies. And the dependence on these energies is of different qualities. It proves the existence of the gravity-spin energy as the reality of the physical world.

There has been revealed a dependence of EEG of people on changes in the acceleration of the Earth's rotation. Often, these changes coincide with certain planetary positions. How do these facts relate?

There was a need to understand how the mentality of people changes at the peak change of the direction of rotation of the vortex of non-electromagnetic energies using previously described and applied methodology. For this, EEG survey results were coincided with peaks of change in the rotational speed. This process is digitized.

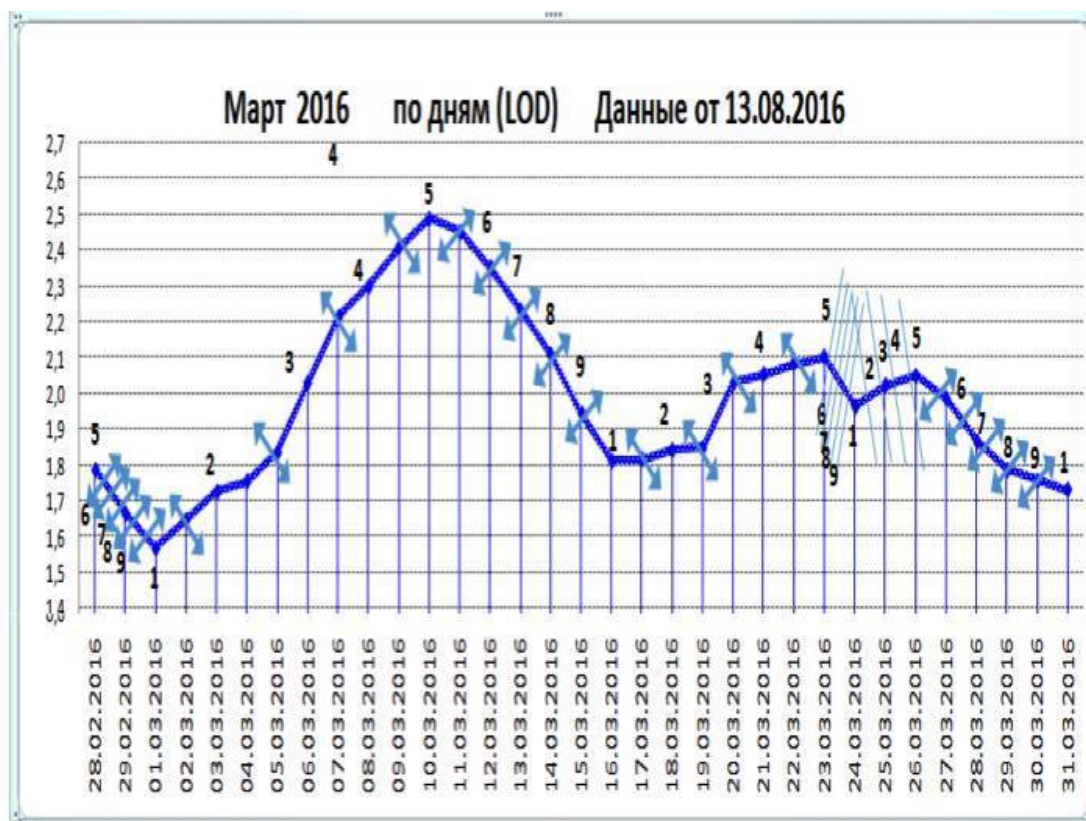

Here is an example.

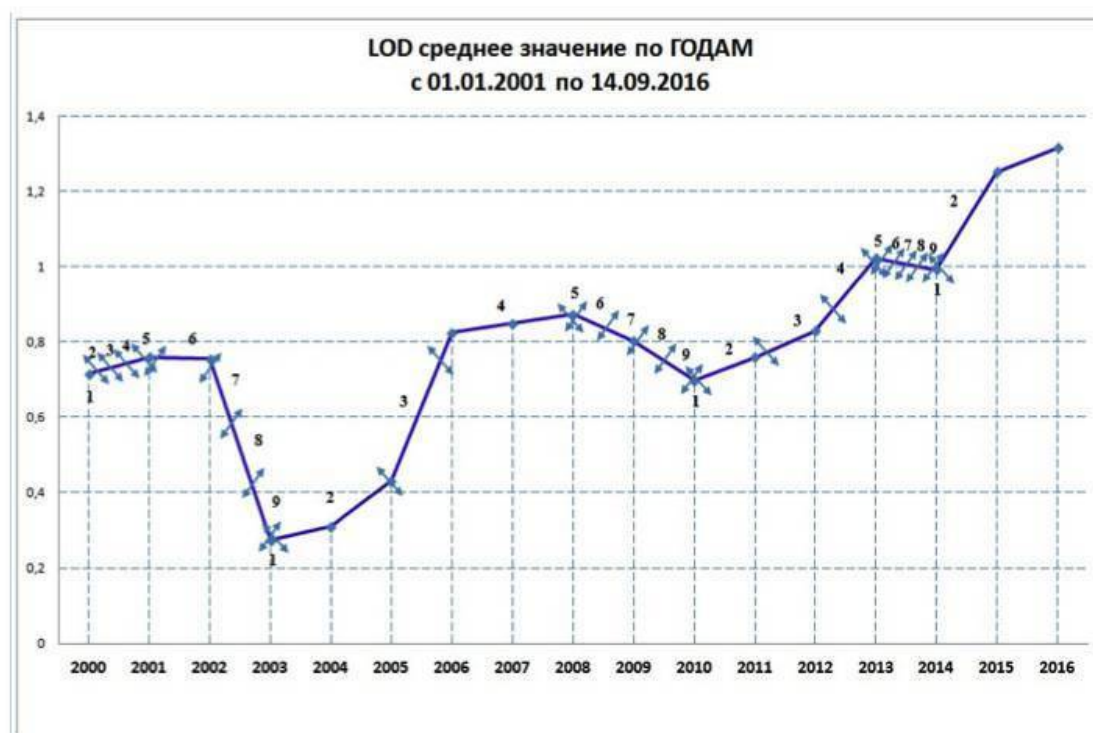

Left scale in the graph is in milliseconds. This deviation from the average length of day time (LOD) from the average for the time of observation. The lowest point on the graph represents time of the maximum speed of rotation of the Earth, the highest – the minimum speed in a given time interval. These are bifurcation points, passing a right-handed rotation of Torsind, instrument measuring such energies (upper point of the graph), on the left-hand (at the top of the graph). And the numbers, surveyed group are from 1 to 9. They correspond to definite numbers showing the Earth's rotational speed, the duration of the day with respect to the average values. In this example, the points under 5 are close to zero, i.e., so this is a typical speed of the rotation of Earth during the last century, decades.

The lower points are numbered as 1. They are close to negative 1 millisecond. That is, in a given time interval, the Earth's rotational speed was less than 1 millisecond than over the past decade, when it was measured.

And there is other data.

In March of 2016, the Earth's rotational rate was much lower than in 2003. But the figures also vary from 1 to 9. They reflect the dynamic, rather than absolute values. Therefore, it was necessary to increase the scale and get similar plots over the years.

Each examinee received the corresponding number – encoding – in the annual scale.
There is an example of such encoding and combining it with the frequency of EEG and ECG.

Номер обследуемого	Код 1 ДЕНЬ	Код 2 ГОД	O2	O1	P4	P3	C4	C3	F4	F3	ЭКГ
1	8	5	10.98	11.65	10.43	11.34	10.98	12.77	11.74	11.42	32.72

This example shows the code values, reflecting the dynamics of the Earth's rate at different scales of time, the frequency of the EEG at the points of their removal and the value of the ECG.

In this example, it is the frequency of the EEG in the pick-up points in the relaxation of the examinee (sitting with eyes closed) for 10 minutes.

During the EEG, a man was keeping his eyes open (OE), close (CE), performing logical tasks (Logic), evaluating people from the figures (Figure), from photographs (Photo), was included in the situation of communication and the adoption of creative solutions (Event), again sat with his eyes closed.

There were also other data on each individual: the solving of tests, personality characteristics, professional practice, etc. The most important thing is that the biographical Bemkon profile was filled. There are about a hundred major biographical parameters encoded in the figures. Data set has been created. It was subjected to qualitative analysis.

2.3.2 Results and discussion

We have data on frequencies and other characteristics of the EEG at the points of change of acceleration in the rotational speed of Earth. The rotational speed is maximum with the minimum time length of day.

This is a group 1.

There is evidence on the sign of acceleration in the Earth's rotation, when Earth has a minimum speed in this cycle. This is a group 5.

Now we find the average value of the EEG over all points of all who surveyed over 15 years.

Let's compare the values of these frequencies.

**The values of the average EEG frequencies for a
at different points of change in the accel
Earth's rotation**

Codes	Rotational rate	EEG frequency
Average over days, code 5	Minimum/Days	11,599
Average over days, code 1	Maximum/Days	11,339
Average over years, code 5	Minimum/Year	12,278
Average over days, code 1	Maximum/Year	9,878
Average over all data		11,273

Note an important point.

This is the average data. At the same time, there are people, whose frequency of the EEG under unfavorable cosmic energies do not fall as much as for other people. For most these energies decrease, but for them they may even increase. Similarly, under favorable cosmic energies: the majority can respond by growth of the EEG frequency, and some by fall. Most often those are who have it growing under unfavorable cosmic energies for the majority.

There are differences between groups 5 and 1. The higher frequency of the EEG is for denser ether flows. And lower for the flows of lower density. The same dependence is for EEG frequency on the speed of the Earth in an orbit of movement (Konuhov N.I., 2016a, pp. 78 – 93). The higher is the earth's speed, the more ether it absorbs ceteris paribus. Hence, the higher is frequency of EEG average of all examined at a given time. We draw attention to the fact that over the years the differences

between the results are higher than the differences in the bifurcation points for the measurement in the day's or the week's scale.

Hence, the density of the ether flows is the most important indicator of human response to their change. We react not only on the pivot point (left or right spin energy), but also on the absolute values of the ether density. And this is not less important than just being in the bifurcation point, the spread points. These two indicators "work" together.

At the points where the rotational speed of Earth starts to decrease, an EEG frequency is maximum, at the point of growth – minimum, similarly to change of speed and rotation of water in a river.

There is a principal statement. In these periods, people begin different. This difference is extremely important from the point of view of predicting terrorist attacks, predisposing people to them, classifying terrorists.

At the minimum spin energy with the left twist, people, whose EEG frequency plummets, become angry, emotional, difficult to predict. Spontaneously, under the influence of a gravity-spin cosmic energy, a quality of "successful" terrorist is actualized. It has been proved in brilliant Siberian scientific school (Tumyalis A.V. et al.).

Insightful researchers have taken persons with high and low EEG frequencies. They were presented unconscious stimuli that cause positive and negative emotions. A significant difference in many physiological parameters has been found. There is a difference in the reaction time between people with high and low EEG frequencies.

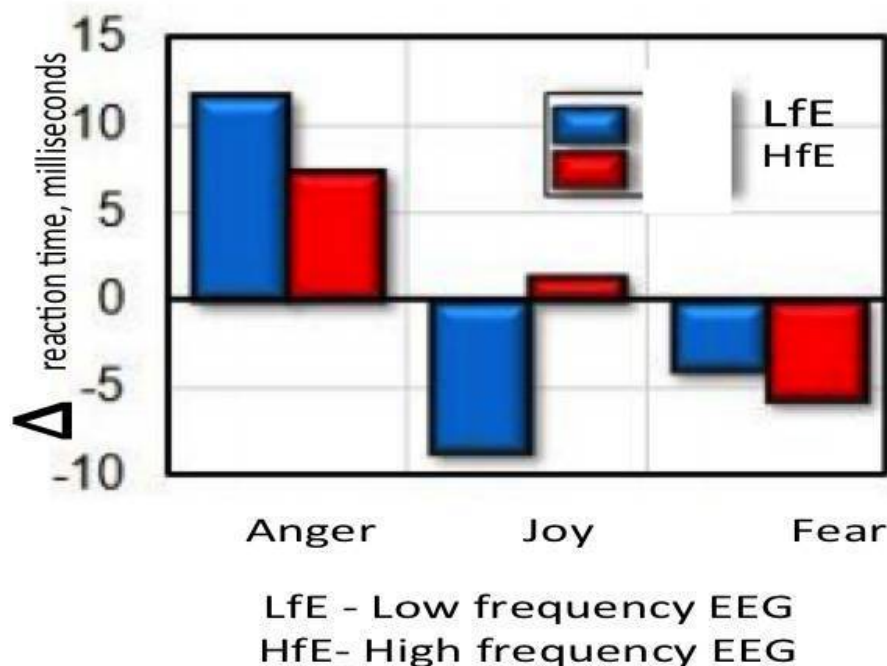

Figure X. Average values of time of motoric verbal response at unconscious presentation of people with anger, joy and fear in modified Stroop test in groups of low– (LfE) and high-frequency (HfE) of EEG.

The differences were also for other psycho-physiological reactions (SGR and others), in incentives with other unconscious stimuli.

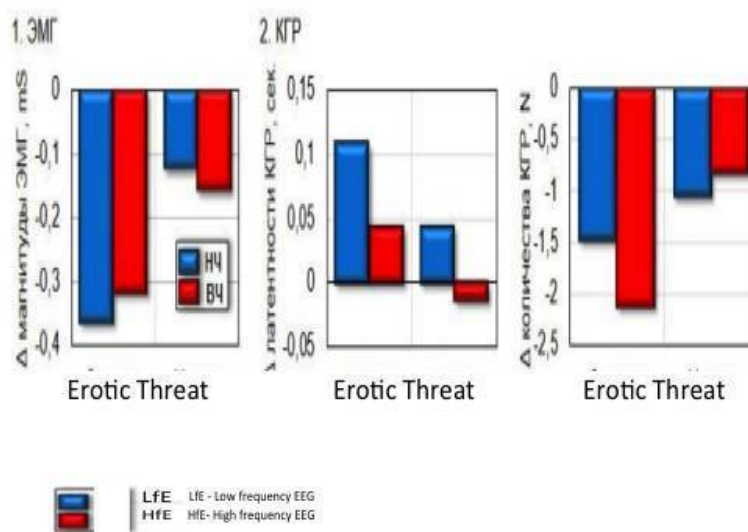

Figure Y. Average values of reactivity of amplitude of EMG(1), latency and quantity of SGR(2) in groups of low- and high-frequency of EEG.

Terrorists are people of a special set of emotions. Anger is more typical for them, than joy. Individuals with lower frequency of EEG have anger arising frequently, much more frequently.

And the EEG frequency decreases with decreasing in a pressure of the ether density.

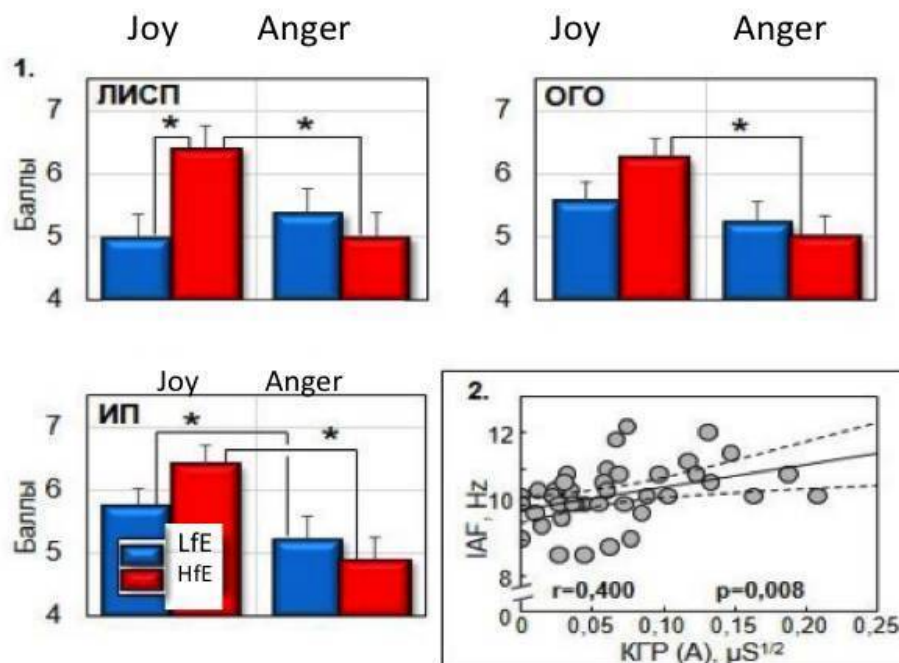

Figure Z. 1. Average values ($M \pm SE$) of evaluations of efficiency of actualization in individual subject space and experiencing emotions of “joy” and “anger” by factors “simplicity of extraction of a sign of memory” (ЛИСП), “accuracy of character’s generation” (ОГО) and “an intensity of experiencing” (ИП) in in groups of low– and high-frequency of EEG. 2. Graphs of linear correlation (Spearman) IAF with an amplitude of GSR under “joy”.

We draw attention to an important feature of the experience of positive and negative emotions by people with high and low EEG frequencies: the difference between these people in experience of negative emotions is more contrast than between the same people in experience of positive emotions. That is, in a situation of fear, we become more contrast and different than in a state of self-confidence. Some maintain high mental activity, and even a burst of energy, and the majority – fear.

Tumyalis A.V. Individual frequency of alpha-rhythm and the mechanisms of perception and experience of emotions. Dissertation... of the candidate of biological sciences. Novosibirsk, 2014. – 135 p.

The information for testees was presented at an unconscious level.

Rejection, anger, fear, sadness, and anxiety are inherent for individuals with a lower EEG frequency. That is, these people are a potential group for recruitment by terrorist organizations by specific methods. Such persons are more likely to experience maladjustment in their environment, they are marginals.

And such conditions are enhanced, aggravated by the corresponding cosmic energies (left-hand twisted ether of low density). Rejection, anger, fear, sadness, and anxiety increase. Of course, this occurs primarily in marginal, in people who have experienced social turmoil, individuals with mental disabilities, and others. Here, it is wrong to deny the social and socio-psychological factors of terrorism. They are superimposed and interwoven with cosmic factors. It breaks where it is thin... Cosmic energies that nourish humanity are constantly changing in intensity and direction of their

spin. So the tendency to be "recruited" by terrorist changes due to changes in the dynamics of social factors and cosmic energies.

Of course, there are many assumptions in the experimental data on the differences in patients with high and low frequency of EEG. Much depends on the type of people, situations or an environment... But if such data were obtained in different scientific schools and in different ways, the data can be trusted in a large confidence limit.
